DOF

The Future is **Now!**

The Ophthalmic Industry Is Going Digital... FOR GOOD REASON!

- Increased Efficiency
 Fewer Errors & Remakes
- Patient WOW Factor
 Increased Capabilities
- Less Pain for Doctor
- High ROI
- EMR Integration*

Don't get left behind

IT'S TIME TO GO DIGITAL

Contact Us Today! Veatch Ophthalmic Instruments voi2020.com | 800.447.7511

Forget About REPETITIVE DATA ENTRIES

Digital refractors include features such as a dual cross cylinder, programmable sequences and wireless interface with pre-test equipment that allow for effortless, error-free exams.

In fact, switching to digital systems allows doctors to see two to six more patients per day.

So you can focus on what matters... YOUR PATIENT

Each manufacturer, advertiser, importer, or other entity (each, a "Listing Entity") that is submitting listings or advertisements for publication in this guide (the "Guide") represents and warrents to Frames Data Inc. ("FDI") that it has the legal right to use all trade names and trademarks that appear in such listings or advertisements and agrees to defend FDI, indemnity FDI, and hold FDI harmless from and against any damage, settlement, loss, cost, expense (including reasonable altorneys' fees) or other liability arising out of a claim that any such listing or advertisement infringes any copyright, trademark, trade name, or other proprietary interest of any third party.

ALL LISTINGS AND ADVERTISEMENTS IN THE GUIDE ARE PROVIDED BY LISTING ENTITIES. FDI CANNOT, AND DOES NOT ATTEMPT TO, VERIFY THE ACCURACY OF ANY LISTING OR ADVERTISEMENT. TO THE EXTENT PERMITTED BY LAW, FDI EXPRESSIV DISCLAIMS ANY WARRANTY CONCERNING THE ACCURACY OF ANY LISTING OR ADVERTISEMENT AND SHALL HAVE NO LIABILITY FOR ON WITH RESPECT TO ANY INACCURACY OR PROGRAPHICAL ERROR CONTAINED IN ANY LISTING OR ADVERTISEMENT. TO THE EXTENT PERMITTED BY LAW, FDI SHALL NOT BE LIABLE FOR ANY DIRECT, CONSEQUENTIAL, INCIDENTAL, INDIRECT, LOST PROFITS OR PUNITIVE DAMAGES INCLURED BY LAW, FDI SHALL NOT BE LIABLE FOR ANY DIRECT, CONSEQUENTIAL, INCIDENTAL, INDIRECT, LOST PROFITS OR PUNITIVE DAMAGES INCLURED BY ANY LISTING ENTITY ARISING IN ANY WAY OUT OF THE PUBLICATION OF ANY LISTING OR ADVERTISEMENT IN THE GUIDE EVEN IF FDI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN NO EVENT SHALL PD'S AGGREGATE LIABILITY FOR ANY CLAIM BY ANY LISTING ENTITY EXCEED THE AMOUNTS PAID BY SUCH LISTING ENTITY TO FDI FOR THE LISTING OR ADVERTISEMENT AT ISSUE.

SUBSCRIPTION RATES: A subscription to the Guide costs U.S. \$125 USD, Canada \$150 and all other countries/jurisdictions \$175 USD. The subscription fee can be included as part of a subscription to Frames Data® 365 or Frames Data® DVD.

A one-year subscription to Frames Data® 365 or Frames Data® DVD costs U.S. \$499.95 USD, Canada \$599.95, and all other countries/jurisdictions \$639.95 USD. To subscribe, please send your order with payment to Frames Data Inc., P.O. Box 396, Congers, NY 10920-0396. For faster service, subscribe online at www.framesdata.com or call our customer service department at 800-739-7555. (Outside the U.S., please call 845-267-3064.)

For technical and product Information call 800-821-6069 ext. 1 or email techsupport@framesdata.com.

Copyright 2017 Frames Data Inc. No reproduction, redistribution, or republication is allowed without the express prior written permission of FDI.

Frames Data Inc. is a subsidiary of Jobson Medical Information LLC

Get back to doing what you love

Helping patients is your passion.

Why spend your time searching for frames and updating your inventory by hand? Just use Frames Data to find **all the frame information you need**. Spend more time helping your patients, not managing your frames.

 [Frames Data] saves me a lot of time not having to manually enter all the product information.

-Anthony N. Sacco, O.D.

DICOM Image Management System (Diagnostic-Software)

With over 32 years of experience, Compulink is proud to be a recognized leader in Optometric EHR and Practice Management solutions. Used by more ODs and 17 Colleges of Optometry, Compulink's OneTab™ EHR allows providers to document an entire exam from a single screen. MACRA-ready, our all-in-Practice one solution also includes Management, RCM, Optical POS & Inventory Management, Patient Engagement, Data Analytics, and Telehealth capabilities. Offering the industry's only 1-hour support response guarantee, our solutions are designed to help improve efficiency and practice profitability. To schedule your personalized demonstration call 800-456-4522 or visit www.compulinkadvantage.com.

Perform corneal topography and aberrometry with the Piccolo Topographer. Quickly move between lanes or offices as the Piccolo mounts on most slit lamps in seconds. Or mount it on its own dedicated table top mount.The Piccolo's advanced miniaturization technology offers extreme reliability and accuracy at a very competitive price. It also uses

the same Placido cone, capture method, features and software as the Keratron and Scout Topographers. Image capture with the Piccolo's patented corneal vertex detector insures +/- 0.10D variability even between uncentered images. Simply move the unit toward the patient's eye to auto-capture, Send up to eight images to your laptop or desktop computer where the software automatically compares multiple images for reproducibility Corneal aberrometry maps, a standard fea ture, clearly display low and high order aberra tions. Quickly determine the amount of cor neal spherical aberration to determine the best suited IOL. Individually remove aberrations from the map to better understand acu ity. Point spread functions, simulated Sneller charts, night scenes, Zernike

information and more are available. Import and subtract whole eye Zernike wave front data to map internal aberration. All software, even LAN and our exclusive Wave Contact Lens software to design custom GP and soft lenses for the most challenging patients is included. Wave lens fitters qualify for special Piccolo purchase plans.

Farnsworth F100 Hue MS Excel Template for Scoring Bichmond

Farnsworth F100 Hue Tests results can be scored on an MS-Excel Spreadsheet using this software template. The patient's selections are scored as errors from a perfect selection and graphed by Excel. Shipped in CD for use on Windows® based PCs. Using this template with MS-Excel on a Windows PC, the patient's arrangement of the 100 Hue

discs is entered and errors are scored. The score is then graphed by the software. Hue discrimination ability is estimated from the total error score and the type of deficiency is determined from the graphical representation of the results. Characteristic 100 Hue plots for congenital protan, deutan and tritan defects show concentrations of errors in well defined positions nearly opposite in the polar diagram representing the circle of hues. Prerequisites: Requires MS-Excel 97 or later version. The CD includes Farnsworth 100 Hue MS-Excel template for scoring and the 100 Hue Score Sheet plus MSWord files of the Farnsworth 100 Hue instructions.

5320B MS-Excel Scoring Template on CD \$75.00 NCI Vision Systems Snellen Software

S & L Optics

Snellen Acuity Software which comes on a flash drive. You can load it on any computer or we can supply an all in one monitor/computer with the software pre-loaded. This is a turnkey system. Mount the unit on the wall with the mounting bracket inclosed - plug it in and you are up and running as the snellen software will load automatically! Several different versions are available for the software so inquire which one would be best for you. What you will get: a quality Dell computer with a three year warranty and on site service. NCI support and flash drive backup. The supplied software loaded on the flash drive serves as an instant backup in any Windows XP, VISTA, Windows 7, 8 or 8.1 computer so your exam lane will be up and running again in minutes. The software does not have to be installed on the computer and may be run directly from the flash drive! What you won't get is a no-name computer or cheap OEM product or a Send It Back and Hope You Get Service and No Backup. NCI software has been sold since 2003 and have thousands of installations in clinics around the world. All standard tests are included. Practice Management - Systems

Medformix®

Crowell Systems

Medformix XXV © is a comprehensive Practice Management, Medical, Optical and Contact Lens solution for any size office. Since 1983 when Crowell Systems pioneered the first Enterprise solution, clients all over the United States have enjoyed its benefits. The disk from Frames Data is loaded into Medformix and all of the data is uploaded into the Frame Inventory system. From there, the practice can enter practice specifics like cost price, quantity on hand per location. Barcodes attached to the frames may be used, or new barcodes may be created to assist with inventory. Inventory is taken through a hand-held scanner. Numerous reports keep track of patient orders, inventory, back-orders, and much more. As glasses orders are created, the selected frame is automatically subtracted from inventory and billed to the patients account. Contact Crowell Systems for current pricing

Medformix® v4 © Crowell Systems

Medformix v4 (C) is a comprehensive Practice Management, EMR, Opticaland Contact Lens solution for any size practice. The Optical Module is based on the Frames Data disk.

When the frame is received from the manufacturer, it is marked for the patient's order. When the patient checks out, the co-pays can be collected. There are numerous patient and inventory reports for management to follow. Barcodes may be used for dispensing and inventory. There are countless more benefits and features but interested parties need to contact Crowell Systems for more information at 800-366-4564 or www.medformix.com *Contact Crowell Systems for current pricing.*

CAMERAS 17

Mydriatic Fundus & Retinal Cameras

New Zeiss FF 450plus Fundus Camera Carl Zeiss Meditec

The new FF 450plus Fundus Camera by Carl Zeiss delivers the quality you expect from the recognized leader in ophthalmic imaging. The FF 450plus provides the highest optical resolution available, and it is the only fundus camera with telecentric optics that guarantee precise retinal measurements. Other benefits include, increased number of flash settings, and an ergonomically designed instrument table with access holes for simple cable routing. In addition, the new FF 450plus now uses the popular Leica R-8 35mm body. *Contact Carl Zeiss Meditec for current pricing.*

Fundus Camera Drug Organizer

Here is a great way to organize the work area around your Fundus Camera or for any angiogram and photo dynamic therapies or other treatment areas. The new Fundus Camera Opthalmic Drug Organizer provides a place for a standard size square tissue box plus cotton swabs and four eye drop bottles. The cotton swabs can be open or in their sterilized wrapper. Made of durable ABS plastic and can be easily wiped clean. The weighted base and four rubber feet insure that the Fundus Camera Drug Organizer stays where it is placed.

The TRC-50DX Series from Topcon is the new gold standard in retinal imaging. Available in either the TRC-50DX model or the TRC-50DX ICG, these retinal cameras have more digital ready capability than any fundus camera on the market and represent today's most sophisticated and complete capturing devices for

retinal documentation. The TRC-50DX Series can support a variety of photo devices, from film to super high resolution CCD cameras. A newly developed control panel, equipped with a touch-screen, allows for a quick and easy change of settings. Additional features include: color fundus, fluorescein, ICG and auto-fluorescence in one camera (50DX ICG model), a small pupil mode and aperture adjustment, 50°, 35° and 20° angles of coverage, 21 levels of flash intensity, and a comfortable backlit panel for use in darkened environments. Fully compatible with Topcon's IMAGEnet® Digital Capture System.

13" (W) x 19" (D) x 23" (H). 77 lbs. Contact Topcon for current pricing.

TRC-NW8F Myd/Non-Myd Retinal Camera

Topcon

The Topcon TRC-NW8F easy-to-use, auto focus, auto capture mydriatic/non-mydriatic retinal camera is designed to obtain high reso lution color and monochrome images of the retina and the anterior segment of the human eve. It is equipped with automatic focusing and capture making its use quick and simple A 12.3 megapixel camera back provides high resolution images with a 45° field of view. The incorporated filters and internal firmware allow the user to obtain color, red-free and fluores cein angiography images while seamlessly communicating with the IMAGEnet® captur ing system. Also available with FAF imaging with exclusive spaide fillers. The TRC-NW8F has nine internal fixation points that facilitate the composition of wide angle views of the retina. The timer feature allows the user to add a time stamp on each captured image

Contact Topcon Medical Systems for current pricing.

 EFC-5200 Fundus Camera U.S. Ophthalmic

Catch retinal disease earlier and with ease with the EFC-5200. This highly advanced fundus camera combines the very best in image acquisition with outstanding photography and image processing. The EFC-5200 allows you to photograph through pupils as small as 3.3mm. With the 9-dot internal fixation target, the process is simple and convenient for patients. Plus, outstanding software makes it convenient for doctors as well. This advanced imaging unit truly makes managing diseases such as glaucoma, diabetic retinopathy, and AMD easier than ever before. EFC-5200.....\$15,600

Non-Mydriatic Fundus & Retinal Cameras

> VISUCAM PRO NM ™ Carl Zeiss Meditec

The New ZEISS VISUCAM PRO NM [™] is the new, revolutionary non-mydriatic retinal cameras from Carl Zeiss. This class-leading device compliments the long-standing tradition of superior quality you have come to expect from ZEISS. Combining professional grade, digital sensor technology and legendary ZEISS optics, the VISUCAM PRO NMrises above all other fundus cameras by giving you and the ability to photograph through undilated pupils as small as 3.3mm! This unique capability facilitates a comprehensive view of the retina, making it the optimal choice for the early detection of diabetic retinopathy and many other ocular conditions.

18 CAMERAS

and can image both dyes simultaneously, providing a picture of both retinal and choroidal circulation at the same time. Not only are the images clearer and more detailed than traditional fundus cameras, but rapid scan speeds enable dynamic imaging, capturing the subtleties of partial blockages of blood flow.

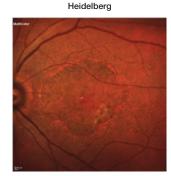

The infrared imaging capability of the SPECTRALIS expands the range of patients that can be imaged when poor media, small pupils or lack of dilation hamper traditional fundus cameras. Infrared light penetrates deeper into tissue, often revealing structural changes which may not be visible under contact lens examination or on white light photos. The outline of CSCR or PEDs may be more distinct due to deeper layer reflections.

Without the need for dye, non-invasive BluePeak™ blue laser autofluorescence captures fundus autofluorescence (FAF) images, providing both structural and metabolic information about the retina.

Essential features include:

TruTrack[™] active eye tracking, Heidelberg Noise Reduction[™], Confocal Scanning Laser Ophthalmoscope, 5 imaging modes (Infrared, BluePeak[™], Blue reflectance, FA, ICGA), movie image capture, optional non-contact ultra-widefield angiography, field of view up to 150° with optional lenses, network ready, and upgradeable to add SD-OCT. *Contact Heidelberg for current pricing.*

SPECTRALIS® HRA with MultiColor

The SPECTRALIS HRA with MultiColor is optimized to match the peak excitation of fluorescein and ICG, and can image both dyes simultaneously, providing a picture of both retinal and choroidal circulation at the same time. Not only are the images clearer and more detailed than traditional fundus cameras, but rapid scan speeds enable dynamic imaging, capturing the

subtleties of partial blockages of blood flow.

The MultiColor imaging capability simultaneously combines three laser wavelengths to produce high contrast MultiColor images highlighting structures at different depths within the retina. MultiColor imaging delivers detailed images even in difficult patients including those with cataracts or nystagmus.

Without the need for dye, non-invasive BluePeak™ blue laser autofluorescence captures fundus autofluorescence (FAF) images, providing both structural and metabolic information about the retina. *Contact Heidelberg for current pricing*. Eyetek Flush Mount Adapters for Canon CR5 & CR6 with Retinaphile Advanced Software

Instruments for Vision

The EYETEK line of Non-mydriatic upgrade adapters welcomes our lastest adapter design, the Canon full size chip flush mounted adapter. Specially made for the Canon CR5 & CR6, this adapter seemlessly attaches the Canon Digital adapter to your retinal camera. With up to 21 mega pixels of resolution, your results rival any new system and costs almost two thirds less. All of our adapters are sold with the new Imacam Advanced imaging sofware. Easy to learn and navigate, you can handle all of your imaging needs with one software.

Typical system price\$4,950.00 Eyetek Retinal Camera Upgrade

Adapters with Retinaphile Advanced Software

Instruments for Vision

The EYETEK line of Non-mydriatic upgrade adapters will take you from the film age to the forfront of digital retinal imaging. Our adapters are available for just about every Canon and Topcon Non-mydriatic camera ever produced. With up to 15 mega pixels of resolution, your results rival any new system and costs almost two thirds less. All of our adapters are sold with the new Imacam Advanced imaging software. Easy to learn and navigate, you can handle all of your imaging needs with one software.

Typical system price\$3,950.00 California

Optos

With California, Optos has incorporated new hardware and software technology enabling practitioners to see more, discover more and effectively treat more ocular pathology thus promoting patient health. We are committed to further strengthening our clinical evidence while demonstrating the importance of imaging the entire retina.

California includes a new UWF optomap® imaging modality; indocyanine Green angiography (icg) while retaining:

Composite color

- Red-free
- Autoflourenscence (af)

- Fluorenscein angiography (fa)

Images are now presented in ProView which eye. It is equipped with automatic focusing Contac displays optomap in a consistent geometry and capture and a fully automated mechanism pricing.

that accurately represents anatomical features in the retina. Further, ProView enables automatic image registration for disease tracking over time, and inter-modality image comparison.

New Proprietary optical hardware optimizes and maintains resolution of the optomap images throughout the scan of the retina resulting in more clarity in the far periphery.

Image overlay enables comparison between composite color images and red-free, af, fa, or icg images. Additionally, comparisons can be made between different images or different dates by scrolling through all stored images. *Contact Optos for current pricing.*

Daytona & Daytona plus

As with all of the Optos UWF devices, both Daytona and Daytona plus provide eyecare professionals with UWF digital images of 200 degrees or up to 82% of the retina in a single, non-contact optomap image. In addition, the Daytona plus device comes with the OptosAdvance™ browser-based image review software, which allows for simple documentation, monitoring and referral processing to assist in patient management and improved patient flow.

Features

 Non-mydriatic ultra-high resolution images in under a second, through 2mm pupils

 Four image modalities available; 3-in-1 color depth imaging, green laser view ("red-free"), red laser view and autofluorescence (af)

 All images presented in ProView[™], displaying optomap images in a consistent geometry which accurately represents anatomical features in the retina and enables automatic image registration for tracking over time and inter-modality image comparisons

 Daytona plus has new hardware which enhances the resolution in superior and inferior fields.

 Inclusion of the innovative OptosAdvance review software that simplifies workflow while enabling comparison overlay between image modalities and different dates, over time. OptosAdvance is also available for Daytona devices.

Contact Optos for current pricing.

TRC-NW400 Non-Mydriatic Camera Topcon

The Topcon TRC-NW400 is a fully automated, easy-to-use, auto-focus, auto-capture nonmydriatic retinal camera that is designed to obtain high resolution color images of the retina and the anterior segment of the human eye. It is equipped with automatic focusing and capture and a fully automated mechanism

that moves the optical head from one eye to the other without operator intervention. The large 10" color touch-screen monitor allows for total control of the functions as well as displays the acquired images. A high resolution color sensor provides quality images with a 45° field of view. The TRC-NW400 has 9 internal fixation targets that facilitate the composition of wide angle views of the retina. The DICOM compliant TRC-NW400 can be used as a stand-alone unit or with a remote server or EMR system.

The TRC-NW8 Non-Mydriatic Retinal Camera is the ideal instrument for the growing market in Telemedicine and Diabetic Screening. The camera features several automated functions that allow anyone to quickly and easily capture high quality images. Simply align the patient and the instrument automatically focuses and automatically fires. The TRC-NW8 gives the operator added flexibility in image capture with 9 flash levels to choose from and 8 peripheral fixation points as well as a built-in standard central fixation point. The camera also features a built-in optical green filter that provides true optical red free photography which is extremely useful for glaucoma detection. The TRC-NW8 can be combined with Topcon's IMAGEnet™ and Synergy[™] software for efficient data management and networking. 10.7"(W) x 19.9"(D) x 20.9"(H). 24.5kg. AC110, 120, 230, 240V selectable. 50/60Hz. Contact Topcon for current pricing.

TRC-NW8F Myd/Non-Myd Retinal Camera

Topcon

The Topcon TRC-NW8F easy-to-use, auto focus, auto capture mydriatic/non-mydriatic retinal camera is designed to obtain high resolution color and monochrome images of the retina and the anterior segment of the human eye. It is equipped with automatic focusing and capture making its use quick and simple A 12.3 megapixel camera back provides high resolution images with a 45° field of view. The incorporated filters and internal firmware allow the user to obtain color, red-free and fluorescein angiography images while seam-lessly communicating with the IMAGEnet® capturing system. Also available with FAF imaging with exclusive spaide fillers. The TRC-NW8F has nine internal fixation points that facilitate the composition of wide angle views of the retina. Specialty Cameras

CellCheck D | D+ Konan Medical USA, Inc.

Introducing the first multi-imaging system for donor corneal analysis. CellChek D+ provids an amazing view into the cornea that simply has never been seen before defining structure of endothelium, stroma, and epithelium. Comprehensive imaging to assist both eye banks and corneal surgeons to make better decision on implantable material.

CellChek D+ features a patent applied for "Donor Enhance" imaging system that provides remarkable views of endothelium, intrastomal structure, and the epithelium. The range of new information from which to make better clinical decision is spectacular: blood cells, fungus, rough keratome cuts, and dead cells, epithelial anomalies. Never have we had this view of pre-implanted material. Corneal surgeons are finding this information to be illuminating in helping to understanding graft success and failure.

Wave Analyzer Medica 700 Wavefront **Aberrometer**

Essilor Instruments USA

(NEW!)

The WAVE ANALYZER is a fast and effective automatic aberrometer that provides 7 different detailed measures in one easy-to-use solution. With wireless connectivity, it facilitates the sharing of results with patients and transfer of data for follow-up monitoring or action.

- Based on wavefront and Shack-Hartmann technology / Large touch screen makes it simple to navigate or follow the progression of measurement cycle / Easy data sharing with clear and customizable result reports

- Comprehensive measurements: 1/100 diopter refraction for day and night vision | Low and high order aberration with simulation of vision quality | Topography and pupillometry for contact lens fitting and keratoconus detec tion | Retro-illumination of crystalline lens for opacity check and cataract screening | Scheimpflug-based pachymetry and tonome try for secured glaucoma screening Contact Essilor Instruments USA for current pricing.

> Keratron Corneal Analyzer EveQuip

The Keratron automatically captures only properly focused images, guaranteeing accurate, reproducible maps. It is the only topogra-

within 0.25 microns and has set a new standard for accuracy and reproducibility. Our exclusive method maps from corneal vertex to periphery. Curvature of the cornea as well as elevation in submicron steps are determined. Elevation mapping is used with our contact lens fitting software. Consists of computer, video keratoscope and software. 40lb, 110V. Starting at\$13,000.00 Keratron Scout Corneal Topographer

EyeQuip

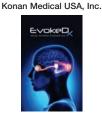

The Keratron Scout provides hand-held, por table corneal topography with big instrumen features and accuracy. The Scout features quick 32-bit software. Easy alignment and auto image capture. Cord or battery powered. Hand-held, slit lamp mount or operating roon mount. Fit custom RGP lenses using tear film clearance or standard curvature methods, or use Dr. Jim Edwards' WAVE software for the ultimate CAD-CAM lenses. The Scout consists of the hand-held topographer, docking station laptop or desktop and computer Approximately 10"h x 4-1/4"w x 8"d. Corded model approximately 2lbs. Battery powered approximately 3-1/2lbs. Docking station, recharger 110VAC, 1A. Starting at \$10,495.00

The DAS system comes with everything you need to start taking visual acuities. A bright or 22" HDTV is provided to display the 19" brightest acuities and other medias like movies and pictures. The system is run with an android device the size of a pack of gum. Enjoy the easy upgrade feature, simple remote and very competitive pricing on the most advanced system available Includes: Snellen childrens test, numbers, E's, contrast and a range of Aux tests. Add your own movies through simple wi-fi connection.

EvokeDx Next Generation icVEP+

ERG

Visual evoked potentials have been used to ess various problems in the vision pathway (retina to brain), but have had limited appeal to Ophthalmology and Optometry practices due to difficulties in interpretation and administration. As a fully integrated system, EvokeDa sets a new standard for the eye care practice: faster, easier to use and interpret, smaller, and less expensive.

EvokeDx, a FDA 510(k) cleared system, fea tures a patented visual stimulus "icVEP" and pher proven to measure an aspheric surface to novel analysis methods Tcirc2 and Fstat to

elicit enhanced results with simplified inter pretation.

Results of a recent US multi-center clinical trial were presented at ARVO in which the EvokeDx icVEP technology was used to assess glaucoma damage to the visual pathway. The study data showed that the icVEP strategy provided strong differentiation between normal eyes and glaucoma affected eyes with an overall accuracy estimate (glaucoma cases vs. controls) of A_ = 89.2%.

An additional, independent study last year in Beijing, China on the technology both confirmed this accuracy of classification (92%) and provided data which led to issuance of the first VEP glaucoma diagnostic indication in China.

Reliance Model 7900 Instrument Stand

Reliance Medical Products

The Reliance The Model 7900 is available with instrument wells (IC) or without (NC). Its sleek design allows maximum accessibility to patients and efficient operation. Optional monitor arm displays diagnostic images for you and your patients, High impact and chip resistant, The Counterbalanced Slit Lamp Arm adjusts for instruments weighing between 12 and 60 lbs. and the refractor arm is standard. Both arms have a 10" vertical range, and handle instruments weighing up to 20 lbs., Three rechargeable instrument wells on the 7900 (IC only) accommodate Welch Allyn instruments, Backlit membrane switches located on the console control a chart projector, and the raise, lower and auto down functions of a Reliance examination chair, Longlasting halogen bulb and CSA Mark of Safety.

thread for measuring the tactile sensitivity of the cornea and eyelid margin. Can be used pre-operative or for post-operative recovery. Also known as a Cochet and Bonnet Aesthesiometer or Esthesiometer. Provides direct reading on the instrument of the length of the very precisely calibrated filament. Includes conversion table, which translates filament length in millimeters to a measure of mercury pressure (mm HG). Includes a spare nylon filament with a case. 5670

Nylon Filament 12/100 Set of 5 replacement threads . \$185.00 6051

APD Tester

APD Tester is a patented innovative device that allows simultaneous superimposed view of both pupils. This unique device shows both pupils superimposed at the same time and thereby solves the challenge of detecting RAPD (relative afferent pupillary defect). Optional version with UV illumination supports detection of corneal lesions, abrasions, or foreign bodies.

A unique feature of APD Tester is the examiner's ablility to view both pupils superimposed at the same time. Illumination, however, can be directed to one eye at a time. This method permits observation of a direct response by both pupils. Switching the light to induce a consensual pupillary response easily shows any discrepancy between the pupil reactions. This patented feature helps detect the slightest variation in RAPD. While the APD Tester can be used in normal room lighting, some observations can be enhanced with diminished room lighting.

> Bagolini Bar - Red Richmond

This Red Bagolini Bar provides 16 levels or segments of red filter color for evaluating retinal correspondence in patients with eye deviations. Set includes wooden case. Segments 23 mm square each. Developed by Prof. Bagolini and Dr. Zanasi. Dimensions: 18.3 x 1.3 x 0.2 inch (465 x 33 x 5 mm). 5661

Dominant Eye Test Richmond

Dominant eye is also important in for fine tuning contact lens prescription and monocular refractive surgery procedures. This box simplifies determination of the patient's dominant eye. The box is held at arm's length and the patient is asked to align the star and the circle while each eye is occluded. Only a 'yes' or 'no' answer is required. Full instructions are included. Includes unbreakable 9 inch White Occluder. It is important to know which eye is dominant in case it differs from the dominant hand. This condition, called cross laterality, is known to cause certain specific difficulties with reading, writing and telling left from right. 5539R

The Hertl Exophthalmometer is used for precise exophthalmos measurements (e.g. exophthalmic goiter). The basis of the measurement for exophthalmos determination using the Hertl version is the outer orbital rim (orbital wall) and the apex of the cornea. The integral refraction mirrors with millimeter scales for the left-hand and right-hand measuring halves of the exophthalmometer are calibrated so that the zero mark on the scale will be located in the plane of the resting points of the supports. For exophthalmus measurements the supports are placed against the two temporal orbital walls so that the orbital rim contacts the deepest point of the supports.

Provides 14 Low Vision Charts with: 20/800 -2 Optotypes, 20/630 - 2 Optotypes, 20/500 - 4 Optotypes, 20/400 - 4 Optotypes, 20/320 - 4 Optotypes, 20/250 - 6 Optotypes, 20/250 - 9 Optotypes, 20/160 - 9 Optotypes, 20/125 - 12 Optotypes.And 5 each for: 20/100, 20/80, 20/63, 20/50, 20/40, 20/32 and 2 lines of 5 each for 20/25, 20/20, 20/16. Plus 5 each for near point at 20/800, 20/630, 20/500, 20/400, 20/320, 20/350, 20/200, 20/160, 20/125 and lines of 5 each for 20/100, 20/160, 20/125 and lines of 5 each for 20/100, 20/160, 20/63, 20/50, 20/40, 20/32, 20/25, 20/20, 20/16. Set is 10x12 inch, two-sided, printed on styrene, with covers front and back, metal coil binding on left side. Includes 4523C metal frame adult occluding glasses.

Lea Low Vision Chart Set \$80.00

5131R

Many practitioners see the vertex distance as levels increasingly important when correction is 5613R

greater than 4.00 diopters. The Distometer (or Vertex Distance) gauge is designed to accurately measure the vertex distance between the apex of the cornea and real surface of the trial lens or the inside surface of the spectacle Rx lens. The Conversion Disc is then used to convert the vertex distance into an equivalent lens power for the estimated distance from the eve to the final Rx.

Patients have been demanding greater Rx accuracy due in part to the increasing popularity of custom progressive addition lenses, many of which require a vertex distance for accurate prescription calculation. This is especially true for the higher power lenses required by Low Vision patients. Further, the increasing use of prisms for Orthoptic exercises or Vision Therapy require accurate assessment of the vertex distance.

This Metal Distometer and conversion dial are well made for years of reliable use. 6755R Distometer Set, Metal with Dial and instructions

Neutral Density Bars Bichmond

Neutral Density Bars are used to measure Afferent Pupillary Defects (APD) also called diminished pupil reaction to light levels'. The log units quantify how much light is transmit ted as: 41%, 22%, 12%, 7%, 5%, and 3%. The NEW Richmond Products Neutral Density Bar (P/N 4702) provides twice the frame size for easier exams. It provides the same filter values: 0.3, 0.6, 0.9, 1.2, 1.5, 1.8 Density Log Units. The larger frame size was requested by several Neuro Ophthalmologists. The overall bar is 10" by 1 1/2" (253mm by 38mm). Each frame is 1 1/2" (38mm) square. This unit employs solid color blocks to prevent any dust from collecting between the layers. It comes with a handle for easy use and hole for storage. Density levels are marked on the side The Pocket Neutral Density Bar (P/N 15118) is 6 1/2" by 1" (165 mm long and 30mm) wide Each segment measures 7/8" by 1" (25mm by 30 mm). Fits in your pocket.

PD-82 II Digital PD Meter SNC

Digital readouts made simple and accurate with measurements within 0.25mm. The "cornea reflection light coincidence method" is used, aligning luminous points on the pupils with the measuring line. Measurements can be made for either single or both eyes. Battery operated with a power-saving feature that automatically switches off after one minute of operation.

PD-82..... \$375.00 **Digital Corneal Pupilometer**

Stereo Optical

Corneal reflection pupilometer for precise and digital PD measurements. Digital display of monocular and binocular PDs from 48 to 77 mm (step: 0.5mm)

Automatic standby

Measure monocular and binocular PD for all distances between 35 cm and infinity

Monocular PDs can be measured by occluding one eye if the patient's binocular vision is abnormal

Functional Vision Analyzer™ Stereo Optical

The FVA offers a number of exams to evaluate functional vision and better understand the patient's quality of vision. Background illumination levels inside the unit are constantly monitored and controlled by eliminating environmental variables. The Functional Vision Analyzer™ complies with established research standards. This lightweight and portable unit is guaranteed for two years.

The Functional Vision Analyzer™ also features the new upgraded EyeView®Functional Vision Analysis Software that utilizes a digital image processor to procedure a pictorial model of the patients' functional vision based on their F.A.C.T.® contrast sensitivity data. EyeView® can also display contrast sensitivity curves as well as the raw data. Data can also be exported to excel files for analysis.

Optec® is a registered trademark of Stereo Optical Company, Inc. Contact Stereo Optical for current pricing.

FT-1000 Non-Contact Tonometer

The FT-1000 is the newest and most userfriendly tonometer on the market. While air jet tonometers offer reliable and quick diagnosis, oftentimes they are uncomfortable for patients. The FT-1000 is not only fast, but also patient-friendly by providing a very silent and soft air pluse. The multi-shot option produces up to three air pulses in an extremely short sequence (0.1 seconds each). Additionally, the FT-1000 includes a color touch screen, which conveniently color-codes all measured values and commands. The FT-1000 also offers the convenience of automatically aligning and measuring to the patient's eve. Practitioners simply adjust the IOP calculation formula to their own preference and the rest is taken care of. Contact Tomev for current pricing at (888)449-4045.

RC-5000 AutoRefractor/Keratometer

The RC-5000 is the newest generation of AutoRefractor/Keratometers. Features include automatic touch screen measurements and high-speed, built-in printer. The advanced touch-screen display allows you to perform both refraction and keratometry automatically with one simple movement. Capture the eye on the display by touching the center of the pupil with your fingertip and the RC-5000 will automatically align and begin measuring. The RC-5000 is equipped with ethermet C port for data transmission to a computer of refraction system.

Contact Tomey for current pricing at (888) 449-4045. **RC-800 Auto Refractor/Keratometer**

TOMEY RC-800 AutoRefractor/ The Keratometer was developed to satisfy all expectations. Features like color touch screen with auto shot function and a high speed printer make this device easy in handling as well as efficient and fast in operation. The RC-800 provides ease of operation with the incorporation of intuitive touch-screen operation which not only measures refraction and keratometry but also diameter measurement of the cornea and pupil. For refraction, fogging is applied automatically for each measurement for more accurate results. And keratometry measurements give you enough information for contact lens fitting.

Contact Tomey for current pricing at 888-449-4045.

iBEX LED Wireless B.I.O. Trevi Technology

iBEX's LED delivers a high-contrast homogenous white light that delivers substantial gains in fundus observation that were once difficult. It's a leap beyond conventional tungsten and halogen illumination.

With exceptionally engineered dual-lithium rechargeable batteries, you can stay unplugged all day, every day - even for multi-ple days — without the need to recharge. And when it's time for a recharge, simply plug the charger tip into the BIO and you'll be quickly up and running. The illuminated LED fuel gauge on the back of the unit lets you know when it's fully charged and also when to recharge. Contact Trevi Technology for current pricing.

LDR-7800 Digital Refractor

U.S. Ophthalmic

Luxurious design meets exceptional function-ality in Luxvision's incredibly robust digital refracting unit. The LDR-7800 features a realtime graphical representation that is displayed on the screen and guides you and your staff through the entire test process. With countless tests to choose from, you can customize sequences that you most commonly prefer to use in clinical practice. You'll also save valuable testing time because the LDR-7800 gathers pretesting data so you have an excellent starting point and basis of comparison. In addition, this cutting edge device features a dual cross cylinder lens and an automatic occluding function.\$8,390.00 LDR-7800.

Packed with features and extras, the Luxvision R-2600 is a truly impressive Manual Refractor. Perform complete vision testing on virtually any patient. Operators will appreciate the extensive sphere and cylinder powers, as well as the unit's several built-in auxiliary lenses. The R-2600 simplifies cross cylinder testing by eliminates the need for axis adjustmentthe two functions are completely synchronized. Users will also enjoy an easy-to-use convergence system that allows you to switch between distance and near with one simple flip of a lever. Several built-in auxiliary lenses plus three accessory lenses are all included with this versatile unit.

Power: DC 12V

CT-4116 Pupil Height Measurer U.S. Ophthalmic

Convenience, visualization, easy operation and accuracy make the CT-4116 indispens able during the exam process.

Instructions:

First, clip this measurer on the frame; aim the center point at the intermediate position of the bridge. Then adjust measuring pieces by knobs on both sides. When the upper edge of the measuring pieces aligned with the pupil center, the pupil height can be read at the lower edge of the frame. CT-4116 ...

.....\$113 EPD-2600 Pupilometer

U.S. Ophthalmic

A reliable pupillometer is a requirement for modern-day optical dispensing and this par ticular Ezer unit features everything your prac-tice needs including vertex distance measure-ment capabilities. The EPD-2600 efficiently measures the distance between the visual axes of the two eyes. Good PD measurements are essential for proper optical alignment and binocular vision. With the EPD-2600 you will enjoy wide range measurement capabilities, digital read and LED all in a lightweight device that is accurate, consistent and easy to use. EPD-2600....\$173.00

The Ezer Digital Practice is an affordable way to optimize your practice by creating modern, efficient and accurate exam lanes. All the equipment included is networked in order to accelerate the refraction procedure and increase its' accuracy. This high-tech set-up will also give your practice a contemporary look that your patients will feel assured by, also making their experience swift, comfort able and professional

The Ezer Digital Practice Includes: EDR-5200 Digital Refractor ERK-5200 Auto Ref/Keratometer

ECP-5200 Chart Projector

Please contact U.S. Ophthalmic for current pricing

Prices subject to change without notice

Ezer ECP-5200 Chart Projector U.S. Ophthalmic

A few features include a compact and light design, the ECP-5200 can be placed in a small and narrow space. Various measurement modes include: binocular balancing, strabismus, aniseikonia, stereovision, binocular fusion, suppression, etc. With multiple charts: Red/Green polarizing filter and Maddox Rod to check heterophoria, we are able to achieve higher reliability of vision tests. The ECP-5200 with 23 charts including Red/Green and Polarizing filters are the new solution for Binocular balance test. Stereo test Aniseikonia test, Fusion test.

Number of Chart: 32

line 8, Single isolation 15, Red/Green 1

A few features include a full data display with high contrast LCD in which a large amount of information can be displayed. 18 visual acuity test charts, 26 vision test charts, and up to 35 user defined unit test charts support the most advanced eye test process. EDR-5200 offers worldwide global standard chart types. More accurate testing is guaranteed by positioning examinees' eyes in the correct vertex distance through the vertex distance check window. The automatic occlusion function allows for a precise and accurate test by preventing unwanted accomodation during lens changing. The EDR-5200 provides multiple muscle balance tests: Anisekonia, Maddox, etc.

OCULUS Binocular Loupes Oculus

The OCULUS Binocular Loupes have been well-known for decades among the ophthalmologists due to their ergonomically shaped frames. Their lightweight prevents strain during long periods of use. They are made of high-quality, coated optics to ensure highresolution and color authenticity. The flip up lens feature enables spatial orientation during work pauses, while an optional near portion adapter enables the wearers of bifocals and progressive lenses to wear their normal correction lenses. The Loupes come in a 1.8x magnification with a working distance of 37 cm, or 40 cm working distances. They are available in a large or small metal frame.

Contact sales@oculususa.com for pricing.

OCULUS Easyloupe® Titan

Made with high quality optics, the Easyloupe® Titan offers a modern design that is lightweight, flexible and easy to adjust. Both oculars are individually adjustable for pupil distances of 50 – 75 mm. With its unmatched depth of field, sharp and bright image, the Easyloupe® Titan is an ideal assistant in surgery and when precise magnification is needed. The Easyloupe® Titan comes in a 1.8-fold magnification that has a working distance of 37 cm, or a 2.5-fold magnification that has a working distance of 40 cm. *Contact Oculus for current pricina*.

APD Tester is a patented innovative device that allows simultaneous superimposed view of both pupils. This unique device shows both pupils superimposed at the same time and thereby solves the challenge of detecting RAPD (relative afferent pupillary defect). Optional version with UV illumination supports detection of corneal lesions, abrasions, or foreign bodies.

A unique feature of APD Tester is the examiner's ablility to view both pupils superimposed at the same time. Illumination, however, can be directed to one eye at a time. This method permits observation of a direct response by both pupils. Switching the light to induce a consensual pupillary response easily shows any discrepancy between the pupil reactions. This patented feature helps detect the slightest variation in RAPD. While the APD Tester can be used in normal room lighting, some observations can be enhanced with diminished room lighting. 6889R ADP+20 Tester with LED and UV illumination

Amcon Dry Eye Test (DET)

Amcon Dry Eye Test (DET) strips 0.12mg. Amcon DET Strips allow the precise measurement of Fluorescein Breakup Time (FBUT). The slim tip design limits the amount of fluorescein that is applied to 1 µl. Traditional fluorescein strips can flood the fragile 3 to 7µl tear film volume with up to 17µl of fluid. The tear film is not compromised so that a more accurate and more reliable FBUT reading is acquired. The thin, lint-free fluorescein impregnated tip allows virtually no sensation when applied to the bulbar conjunctiva. Protective barrier keeps fluid off finger. Sterile. Each box contains 50 pouches of 2 strips each. PO-5200.....\$19.95

Amcon Fluorescein GloStrips - 0.6mg

Amcon

Amcon Fluorescein GloStrips are used to stain the anterior segment of the eye when fitting contact lenses, disclosing corneal injury, and in applanation tonometry. Narrow, rounded tip allows for exact placement of dye. Tip is smooth, lint-free. Protective barrier keeps fluid off finger. Sterile. Active Ingredient: Fluorescein Sodium 0.6mg. Store below 30°C (86°F). Size: 100 or 300 per box.

PO-5300 (300 Strips/Box).....\$26.50/box

Amcon Fluorescein GloStrips - 1.0mg

Amcon Fluorescein GloStrips are used to stain the anterior segment of the eye when fitting contact lenses, disclosing corneal injury, and in applanation tonometry. Narrow, rounded tip allows for exact placement of dve. Tip is smooth, lint-free. Protective barrier keeps fluid off finger. Sterile. Active Ingredient: Fluorescein Sodium 1.0mg. Store below 30°C (86°F). Size: 100 per box.

Solar-Rolz provide 100% UV protection for patients who have been dilated during their exam. The unique rolled design makes them fun to wear and provides a perfect fit for both adults and children. No adjustment necessary. Solar-Rolz can be worn under eyeglasses. 100 per bag.

Mydriatic Glasses/Specs

lip-Cover Patches Richmond

These Slip-cover Patches avoid skin irritation and discomfort compared to adhesive patches. Patches slip easily over the child's glasses. This new packaging of these Slip-cover Patches eliminates the need for separate right and left versions.

Each pair comes with two stick-on designs from the three categories shown. These Slipcover patches remain soft, comfortable and easy to wear. Slip Cover patches can be washed and worn over and over. 6882C

Patient Armrest Support

Topcon's Patient Armrest Support provides multi-positional arm support and an increased level of patient comfort. Easily adjusts to a variety of heights and angles, thereby ensuring maximum comfort for all patients. Clamps to any tabletop surface within seconds. Suitable for a variety of uses including injections and/or routine exams. Features a cushioned surface for extra support. Can be easily dismounted and transported between exam rooms and/or office locations.

Digital PD Meter (Pupilometer)

Belrose Digital Pupilometer Model Bel-NH-L8

New Belrose Digital Pupilometer is precise. Lightweight and durable while still maintaining its modern design. Measures both monoculary and binoculary from 50-80mm in 0.5mm increments. Viewing distance is from 30cm to infinity. Automatic shut-off saves the life of a 3AAA batteries that are included, while still being able to store unrecorded measurments. Best of all is highly accurate by having readings calculated by corneal reflection rather than pupil centers.

Belrose Digital Pupilometer Model Bel-NH-L8 \$295.00 Veatch DP3 Digital Pupilometer

The Veatch Digital Pupilometer provides ease of use along with accuracy. The simple to use corneal reflection alignment system allows the acquisition of both monocular and binocular readings. It is accurate to 0.50 mm and its modern high tech design makes for a great addition to your practice. Contact Veatch for current pricing.

Tonometers

Belrose Applanation Tonometer Belrose

Measures intraocular pressure. Reads directly in millimeters HG. Includes calibration rod. Contact piece is readily removable for sterilization. Accuracy does not exceed ± 0.3mm HG. This applanation tonometer is designed to function as an integral part of the Belrose and/ or other Haag-Streit type slit lamps without interfering with routine slit lamp procedures. Unit swings from the top to the front of microscope head where measurements are then taken. Reading accuracy is obtained regardless of corneal radius or scleral rigidity. Includes prism tip and calibration device. BEL-900 R-Type\$1,195.00 Prism Tip Only..... \$95.00 1-year warranty against defects in materials and/or workmanship.

Belrose Applanation Tonometer B-870 Belrose

New Belrose Applanation Tonometer B-870 to measure intraocular pressure in millimeters hg. Accuracy not to exceed ±0.3mm hg. Doubling prism tip easily removable for sterilization. This tonometer designed to fit slit lamps with a parallel optical system some examples to include Topcon SL-2D, SL-2E, SL-2ED, Zeiss 100/16 and 100/125, and Marco IV. Includes prism tip and calibration rod. Reading accuracy is obtained regardless of corneal radius or scleral rigidity. Introductory Pricel. \$1195.00

The most common and direct method of assessing intraocular pressure

 Made with precise machined components to tringent quality and to add more reliability and repeatability to an established technique

- The take away T type DAT is fitted to the guide plate on the optical axis for the microscope and illumination unit arm - The fixed R type is mounted on a post fitted to the microscope optical body - The Z type DAT fits directly to the optics support arm *Contact Essilor Instruments USA for current pricing.*

Goldmann Applanation Tonometer

Haag-Streit USA

Allows accurate measurements of intraocular pressure to be conducted as a routine examination on your slit lamp. Patented doubling prism requires displacement of only 0.56mm, increasing intraocular tension by only 2.5% and making scleral rigidity a negligible factor. Average error does not exceed ±0.5mm Hg. Mounting hardware available for installation of most quality slit lamps.

R 900 w/accessory box. T 900 w/accessory box.

Perkins MKII Hand-Held Applanation

Tonometer

Haag-Streit USA

The Perkins Tonometer can be used where other types of tonometers cannot. Postoperative and bedridden patients. The Perkins Tonometer uses the same prisms and test standards as the Goldman Tonometer by Haag-Streit. A.G. Twin lamps provide superior florescence which greatly enhances the familiar semi-circles and make operation of the instrument easy. The Perkins Tonometer has been established for over 20 years as a world standard in hand-held applanation tonometers.

Tonosafe Disposable Tonometer Prism and Holder

Developed for single patient use. Tonosafe eliminates the risk of cross-infection. The Tonosafe and holder combine to have the same mass as the Goldman Prism, so no conversion of results is required. It takes only a movement to position the prism, and the optical clarity provides a superb view of the fluorscein semi-circles. The new Tonosafe disposable Goldman tonometer prisms are a convenient, effective method of reducing the risk of cross-infection between patients and eliminates the need to clean and disinfect prisms. 1 box of 5 trays. Each tray contains 20 Tonosafes and one prism holder. Contact Haag-Streit USA for current Pricing 800-787-5426 or www-haag-streit-usa.com

NT-510 Non-Contact Tonometer

The Marco NT-2000 Non-Contact Tonometer utilizes an advanced soft air puff control that automatically regulates itself for maximum patient comfort. An automatic vertical and horizontal alignment system dramatically simplifies the overall measurement process. An automatic measurement function eliminates the need to push any buttons to register readings.

Contact Marco for current pricing.

Model 30 Pneumatonometer Reichert

The Model 30 Pneumatonometer is an easyto-use instrument that provides accurate tonometry and optional tonography functions. Utilizing a pneumatic pump and 5mm soft silicone contact area, the Model 30 Pneumatonometer records 40 readings per second and displays real time readings of intraocular pressure. A gentle, floating pneumatic sensor touches the surface of the anesthetized cornea with the exact amount of applanation force required to take the measurement. In pulse tonometry mode, the ocular pulse amplitude is charted and recorded along with IOP. The optional tonography mode allows the unit to measure the acquacous outflow efficiency of the trabecular meshwork.

Please visit www.reichert.com to request a quote.

Genuine-brand Ocu-Film+ Tip Covers are the only Reichert-approved covers for use with Tono-Pen tonometers. Ocu-Film+ Tip Covers protect your Tono-Pen tonometer from dust and fluids, and help protect patients from the risk of cross contamination. Unlike knock-off generic brands, Ocu-Film+ Tip Covers are talc-free to further ensure that your Tono-Pen provides you with years of trouble-free operation. Ocu-Film+ Tip Covers are hand-inspected by trained technicians and then sanitized. They are available in bulk bags or individually packaged in polyvinyl pouches.

Please visit www.reichert.com for current pricing. 230651 Box of 150 (individually wrapped)

230652 Bulk Pack of 200 (not individually wrapped) 230653 Bulk Pack of 600 (not individually wrapped)

Ocular Response Analyzer G3

Reichert

Ocular Response AnalyzerG3 (ORA) provides Corneal Hysteresis (CH), and indicator of the visco-elastic properties of the cornea. CH is more predictive of glaucoma visual field progression than CCT or IOP. ORA also presents IOPcc, a measure of intraocolar pressure that is less affected by corneal properties. CH is now reimbursable: CPT code 92145 Contact Reichert for current pricing

> PT100 Portable Non-Contact Tonometer

The PT100 is the world's only first truly portable, handheld non-contact tonometer. Totally cordless and lightweight, the PT100 has a long-life rechargeable battery that ensures efficient exams wherever you may be. It features a user-friendly operating system and an easy-to-read, backlit LCD. The instrument takes an IOP measurement automatically upon proper alignment.

Please visit www.reichert.com to request a quote. P/N 13850

Reichert® 7 Auto Tonometer

Reichert

In 1972, Reichert invented the non-contact tonometer (NCT), and after 40 years continues to offer the most accurate, trusted and complete line of NCTs. With features including an easy-to-navigate touch screen interface, triple measurement mode, and fully automated alignment, The Reichert 7 provides error-free measurements and rapid patient throughput. The unique headrest-only design makes operation of the Reichert 7 extremely quick and efficient. Patients simply lean against the forehead rest while the operator touches an icon on the screen to activate the alignment and measurement process

Please visit www.reichert.com to request a quote. Reichert 7

Reichert® 7CR Auto Tonometer + **Corneal Response Technology**

Reichert

The Reichert 7CR utilizes a patented bidirectional applanation process to characterize the biomechanical properties of the cornea and reduce their impact on the IOP measurement. This measurement, referred to as a corneal compensated IOP (IOPcc) is minimally affected by corneal visco-elastic properties, thickness or surgical procedures, such as LASIK or PRK. IOPcc is more associated with glaucoma than other methods of tonometry, including Goldmann Applanation.

Please visit www.reichert.com to request a quote.

Tono-Pen AVIA® Applanation Tonometer Reichert

With the same trusted accuracy as the clinically proven Tono-Pen XL, The Tono-Pen AVIA features a more ergonomic, award-winning design, a longer lasting battery and larger dual-sided LCD screens. The Tono-Pen AVIA utilizes a micro-strain gauge and advanced microprocessor technology to provide objective IOP measurements that are less influenced by operator bias than Goldmann tonometry. Ocu-Film+ Tip Covers are the only Reichert approved covers for use with Tono-Pen tonometers

Please visit www.reichert.com to request a quote. 230650

> **TONO-PEN®XL** Tonometer Reichert

The Reichert Tono-Pen XL has been the most trusted handheld tonometer for over 30 years, providing IOP readings that correlate closely with Goldmann tonometry. This easy-to-use instrument is designed to be lightweight and ideal for left or right handed use. Advanced signal processing enable fast and accurate IOP measurements with minimal training. Ocu-Film+ Tip Covers are the only Reichert approved covers for use with Tono-Pen tonometers

Examination Chairs

BRAVO Chair Marco

For years, practitioners have asked for a simple-featured, lower cost exam chair for every day primary care. The NEW Marco BRAVO chair embraces this basic concept in a contemporary design that complements our established family of classical chairs and instrument stands. By eliminating the recline mechanism and protruding "elbow" headrest, the BRAVO chair can be comfortably positioned against the wall, maximizing the refraction distance in small exam rooms. Convenient. pop-on cushions feature a high, curved cushion back which provides a comfortable patient headrest position for eve drops or indirect exams. The Marco BRAVO also provides over 15" of elevated stroke, which makes it easy to exam children or smaller patients. Contact Marco for current pricing.

Quality features with a choice of manual or automatic recline. The standard Encore chair includes a manual pneumatic-assisted recline mechanism which uses the patient's weight for effortless patient adjustments. Recline capability allows the practitioner to recline the patient completely flat. The Encore automatic chair provides many of the same features, but provides full electronic capabilities at the touch of a button. Both include a singlehanded headrest, corded foot pedal, scuffresistant high impact covers on arms and base, and the standard durable Marco hydraulic system.

1220 Encore Automatic

Structured entirely out of steel and covered Contact Reliance Medical Products for cur with an ultra-modern, durable composite 800-735-0357 www.reliance-medical.com

body, the new EZ Tilt Chair from Marco is a sleek new design that uses the patient's own weight for a silky smooth counterbalancing motion. Fast and easy-to-use, the new EZ Tilt Chair utilizes an exclusive double hydraulic cylinder system that provides an extended 300mm range of motion that accommodates all patient and practitioner sizes. Standard features include both fingertip and foot-pedal controls, automatic return functions, singlehanded headrest, and a foot-operated chair rotation lock.

NEW!

Instrument Stands

Portable Motorized Phoropter Stand USAscopes

This stand has been made for optometrist and ophthalmologist who would like a motorized refraction stand for small rooms, ideal for satellite offices. This new stand will fit nicely in most small offices and offer a more professional look, than when using some of the other Morrell portable phoropter stands such as the tripods, table top or table clamp stands, which work very well on missionary trips or in remote areas. Choose the lighter weight stand if you will be moving it regularly and need portability or the heavier unit to leave at one location. Both come with locking casters to move from room to room. Optional heavy duty carrying cases available . Contact USAscopes for current pricing.

C-109 Case, holds a CS-15 Table Clamp, Spring Arm, and a Phoroptor. 4 colors Orange, Yellow, Black, and Grey, this case is heavy duty, water proof, & dust proof. Missionary or Expedition Discount available, please ask for details

Contact USAscopes for current pricing. Missionary or Expedition Discount available, please ask for details.

USAscopes

TT-01 Table Top Portable Phoroptor

Stand

The Morrell TT-01 Table Top Phoroptor Stand weighs 12 pounds complete with its spring arm. This sturdy stand will support a phoroptor or another instrument, weighing 20 lbs. or less, on its counterbalanced spring arm without additional counter weight. Assembles in less than 5 minutes, the spring arm has a vertical travel range of 17", so you can easily place your phoroptor at any height needed for children or adults. This stand can be placed on any flat, level surfaces such as desks, tables, counters, etc. If traveling by air, you can pack your Table Top Stand and phoroptor in one of our cases with foam cutouts. If you are very limited in the number of luggage pieces, this stand is ideal as it breaks down so compactly that you can include it in your suitcase between your clothes.

5500 Instrument Stand

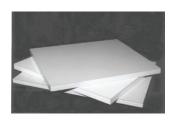

The Woodlyn 5500 Instrument Stand was designed to offer state-of-the-art functionality for the operator while conveniently accom-

angled for easy access, and features two illuminated chair switches(up and down), overhead light illumination adjustment, and three rechargeable wells with indicators. There is a low voltage power supply(for optional BIO) which has a built in hanger. When the instrument is placed on the hanger, power is shut off. When in use, the power is automatically turned on. Illumination control for the BIO is conveniently positioned on the face of the control console. The slit lamp arm was designed for maximum travel; this allows taller patients to be examined with ease, and also allows the arms to go low enough to reach patients in a wheelchair, without reseating the patient.

Computerized Imaging

Visante[™] OCT Anterior Segment Imaging & Biometry Carl Zeiss Meditec

The Visante OCT system is the first to provide clear, highly detailed anterior segment images - including the angle - without the need for ocular anesthesia or a messy, time-consuming water bath. Versatile in application, Visante OCT high-resolution corneal and anterior segment images support the evaluation of narrow angle and ocular health. Additionally, Visante OCT is the first non-contact device to image, measure and document post LASIK flap and residual stromal bed Accurate and repeatable thickness. Pachymetry Map and Pachymetry Difference Map results support refractive and glaucoma care. In postoperative evaluation, the Visante OCT allows imaging and visualization of IOLs and implants. Visante OCT images and measurements will dramatically expand the potential for diagnostic confidence and therapeutic precision.

Marco

The Marco idoc (integrated digital ophthalmic camera) anterior segment imaging system provides the practitioner with the unique capability of capturing and storing still digital images and live streaming videos. idoc seamlessly blends the two recording options together into one compact configuration, allowing the user to simply attach one digital component to any Marco G-model Ultra Slit Lamp. With a simple press of the joystick switch, high-quality digital images and live video streams with no time delay are instantly captured and stored into idoc's simple software program. All basic operations are conveniently displayed on idoc's main screen, allowing the user to quickly and easily access patient files. Contact Marco for current pricing.

Oculus Pentacam® AXL Oculus

The Oculus Pentacam® AXL is the gold standard in anterior segment analysis now with added biometry measurements. The rotating Scheimpfug camera captures up to 100 images and provides the topography and elevation maps for the front and back surfaces of the cornea including total cornea refractive power. It measures axial length, corneal thickness, and anterior chamber depth (ACD), angles and volume. The standard software modules include, 10L calculation software. The unique Belin / Ambrosio display for early keratoconus detection, holladay report, cataract pre-op display, 3D cataract analysis, fast screening report, and contact lens fitting software. The Penatacam® AXL is DICOM compatible and EMR ready. Contact Oculus for current pricing.

With California, Optos has incorporated new hardware and software technology enabling practitioners to see more, discover more and effectively treat more ocular pathology thus promoting patient health. We are committed to further strengthening our clinical evidence while demonstrating the importance of imag-

ing the entire retina

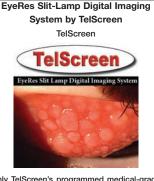

California includes a new UWF optomap® imaging modality; indocyanine Green angiography (icg) while retaining:

- Composite color
- Red-free
- Autoflourenscence (af)
- Fluorenscein angiography (fa)

Images are now presented in ProView which displays optomap in a consistent geometry that accurately represents anatomical features in the retina. Further, ProView enables automatic image registration for disease tracking over time, and inter-modality image comparison.

New Proprietary optical hardware optimizes and maintains resolution of the optomap images throughout the scan of the retina resulting in more clarity in the far periphery.

Image overlay enables comparison between composite color images and red-free, af, fa, or icg images. Additionally, comparisons can be made between different images or different dates by scrolling through all stored images. Contact Optos for current pricing.

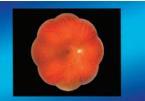

Only TelScreen's programmed medical-grade camera with EDO Technology gives auditquality photos of 559 Medical Necessity codes.

"TelScreen's system is a medically-useful tool that also makes great business sense. My practice now has 7 systems. These EyeRes systems serve as the backbone for patient communication in the lane, improve patients' understanding of their conditions and produce a positive impact on patient behavior." I. Ben Gaddie, O.D.

AutoMosaic Non-Mydriatic Software Topcon

When used in conjunction with the TRC-NW8 Non-Mydriatic Retinal Camera, Topcon's AutoMosaic software provides a fast, convenient and cost-effective way to perform diabetic retinopathy screenings. A series of up to nine multi-field photographs are taken by the TRC-NW8. Internal fixation targets, one centrally and eight peripherally, are built into the retinal camera. The AutoMosaic Software automatically positions each captured image. Then the precise alignment of the overlaying multi-field images is easily accomplished by using either the mouse or arrow keys. Up to 94° of fundus coverage can be easily obtained. Requires IMAGEnet system. Contact Topcon for current pricing.

Computerized Imaging

EZ Capture Software Topcon

FZ Capture is a basic software used to cap ture, view print and save retinal images taken with Topcon capture devices. EZ Capture can capture, view and delete images while connected to a Topcon capture device such as a retinal camera or photo slit lamp attachment. It can also print images and save them to a folder. Contact Topcon Medical Systems for current pricing

> EZ Lite 2 Topcon

EZ Lite 2 is an economical easy-to-use digital imaging software package that can easily integrate into any DICOM server or PACS as well as act as a stand-alone image management system. EZ Lite 2 works with most current Topcon capture devices including nonmydriatic retinal cameras as well as digital photo slit lamps, EZ Lite 2 allows for review and image manipulation and can export images in various standard image formats as well as DICOM format. It also has printing capabilities and operates on Windows 7 and Windows 8 32- and 64-bit OS depending on capture system specifications. Contact Topcon for current pricing

> IMAGEnet EZ Lite[™] Software Topcon

Capture software provides an excellent solution for capturing images from your Topcon SL-D Series Digital Slit Lamp or your Non-Mydriatic Retinal Camera. Compatible with Windows® operating systems. Features the powerful and most frequently needed capture functions for your practice. EZ-Lite is easy to install and easy to use. Contact Topcon for current pricing.

IMAGEnet® 5 Digital Imaging System

IMAGEnet® 5 is a digital software for ophthalmic imaging, capable of acquiring, displaying, enhancing, analyzing and saving digital images obtained with a variety of Topcon photographic devices, such as mydriatic and non-

mydriatic retinal cameras and photo slit lamps. IMAGEnet® 5 features a SQL expanded database and has numerous image man agement functions that facilitate image acqui sition, enhancement, measurement, compari son, etc. Full DICOM compliance allows IMAGEnet® 5 to communicate with EMRs, servers or PACS, save data to remote loca tions, operate with modality work lists and save images in DICOM format. IMAGEnet® 5 easily integrates with Topcon's Synergy™ Ophthalmic Data Management System for complete connectivity.

Spaide Autofluorescence Filters

Topcon

The Spaide AF filters are optimized autofluo rescence filters designed to work exclusively with Topcon's IMAGEnet Systems. Developed by Dr. Richard F. Spaide, MD of Vitreous Retina Macula Consultants of NY, these new matched interference filters have been optimized to allow for better visualization of fun dus autofluorescence. By perfecting the excitation and barrier filters through improved science and state-of-the-art manufacturing processes. the new filters are approximately 20 times more efficient than current genera tion FAF filters and require 40% less exposure Contact Topcon for current pricing

> Synergy[™] Ophthalmic Data Management System

> > Topcon

Synergy[™] is a software platform that enables communication, storage and management of images and reports from all types of ophthal mic instruments within a single, secure digital environment. The system is accessible via a web browser or a 3G compatible handheld device. Synergy enables the physician to have instant access to their clinical reports, data and images from virtually anywhere in the world. Utilizing Topcon's Connecting Vision's[™] initiative,Synergy integrates information from a multitude of ophthalmic instru ments and devices into a single, secure envi ronment. It enables doctors to view, organize and transport the images and edit information as they follow patients' care, thereby providing the opportunity to save money, increase productivity and improve patient manage ment. Provides a seamless interface to EMR. Contact Topcon for current pricing.

TRC-NW8 Imaging System Topcon

The Topcon TRC-NW8 Imaging System combines IMAGEnet™, the recognized standard in fundus imaging telemedicine software, with the Topcon TRC-NW8 non-mydriatic retinal camera to provide an easy to use telemedicine color fundus screening package. The system features color and red-free photography with the TRC-NW8 fully automated retinal camera that includes auto focus, auto shoot and auto small pupil detection. An external digital camera ensures that you have the latest resolution. The software component of the system, IMAGEnet[™], features a comprehensive package of image measurement and patient education tools and an AutoMosaic™ function that provides a panoramic image of the retina (85° and greater). The system is network ready for a variety of remote viewing applications. Also available as a stand alone configuration, eliminating the need for a PC. Contact Topcon for current pricing.

ReSeeVit™ Evolution Digital Imaging Upgrade Package

Veatch

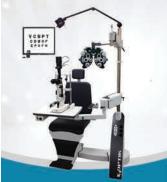

The ReSeeVit™ Evolution Digital Imaging Upgrade Package is designed for the practitioner that already owns a video-capable slit lamp. The software is the same as ReSeeVit™ Evolution Digital Imaging Slit Lamp System. It is a complete package that allows image cap-ture, storage and printing of digital images from your slit lamp. The package includes the: ReSeeVit[™] software, computer, monitor, printer, computer cabinet and our elite Digital Camera kit with an effective resolution of 4.0 mega pixels. Contact Veatch for current pricing.

SPECTRALIS® HRA+OCT

Heidelberg

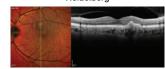

The SPECTRALIS HRA+OCT is a unique ophthalmic diagnostic imaging and angiography device used primarily to examine the structures of the retina, macula, and optic nerve. It combines two technologies, confocal scan-ning laser ophthalmoscopy (cSLO) and spectral domain optical coherence tomography (SD-OCT). It is the only spectral domain OCT imaging system to incorporate all the essential features listed below.

TruTrack™ active eye tracking, AutoRescan™, FoDi™: fovea-to-disc alignment technology, Heidelberg Noise Reduction™, Confocal Scanning Laser Ophthalmoscope (Cslo), BluePeak™ with RegionFinder™: to monitor RPE health in conditions such as AMD and hydroxychloroquine administration, 6 imaging modes (SD-OCT, Infrared, BluePeak blue laser Blue autofluorescence, reflectance. Fluorescein Angiography, Indocyanine green angiography), movie image capture, optional non-contact ultra-widefield angiography, fundus image field of view: from 15° up to 150° with optional lenses, network ready, and optional anterior segment module with cornea, sclera and angle-to-angle SD-OCT imaging.

Contact Heidelberg for current pricing.

SPECTRALIS® HRA+OCT with MultiColor™

Heidelberg

The SPECTRALIS HRA+OCT with MultiColor is a unique multi-color imaging and angiography device used primarily to examine the structures of the retina, macula, and optic nerve. It combines two technologies, confocal scanning laser ophthalmoscopy (cSLO) and spec tral domain optical coherence tomography (SD-OCT).

The MultiColor imaging capability simultaneously combines three laser wavelengths to produce high contrast MultiColor images

CRK 7000 Digital Refractor/

Keratometer

Coburn Technologies

The Huvitz Auto Refractor CRK-7000 is designed to help with more precise measurement of refractive power and corneal curvature. Its various functions make your practice more efficient and improve patient comfort With auto start mode, the Huvitz CRK-7000 Keratometer can maintain fogging throughout multiple measurements that is ideal for use with children or other patients who find it difficult to fixate on the target chart.

Features include:

- · Extensive diopter measurement
- · Choice of 5 or 10 prism display for better viewing of low, normal and high prism areas
- · Automatic detection of progressive lenses and size
- · UV measurements to an exact value
- Built-in printer with one-touch control
- · Dark sunglasses mode
- · Adjustable TFT LCD w/ LED backlight display
- Network connectivity
- Contact Coburn Technologies for current pricing

HRK 7000A Auto Refractor/

The Huvitz Auto Refractor HRK-7000A offers a Retro-Illumination Mode for abnormal crystalline lenses, cataracts, and scratches of cor neas. With increased REF power of the Huvitz Auto Refractor, you also can check Sph, Cyl and Axis that cannot be measured in the no mal mode.

Features include:

- Instant automatic lens recognition
- Optimized Wavefront Technology
- Hartman-Shack Micro-Lenslet Array
- Graphical Display of Refraction Map
- Peripheral Keratometry Measurement
- Retro-Illumination Mode
- Pupil and Iris Size Measurements
- Auto Eye Tracking

- Vision Comparison Function

 Auto-Cut Printer Network Connectivity

Unlike many conventional diagnostic

devices, the HRK-8000A Auto Refractor / Keratometer is based on Hartmann-Shack wavefront sensor, which analyzes many focal spots of a light wavefront. It has the ability to measure not just the basic refraction error of a customer, but to obtain a spatially resolved refraction map.

The new Huvitz HRK-8000A auto refractor / keratometer utilizes a unique wavefront analysis algorithm and surpasses conventional and simple refraction. This ophthalmic equipment offers added values with high order aberration data output for customized lenses and observation of patients before and after refractive surgery.

Keratometer I has dual measuring power wheels. The dual reading wheels simultaneously measure in both millimeters and diopters. New features include a rubber eyecup for both the naked eye and glass wearers, and an internal fixation light for aphakics. One position measures both meridians without changing the optical system. Uniform diffuse illumination and wide dioptric range (30.00D to 61.00D with accessory lenses) combine to eliminate error. The split miers system is standard. Brass and stainless steel construction ensure durability.

Contact Marco for current pricing.

SO-11 Keratometer SNC

Features include LED illumination (no bulbs to replace), dual calibrated measuring drums which are graduated in both diopters and millimeters. Diopter range of 52.00D to 36.00D with a millimeter range of 6.50 to 9.40. Also offers dual focusing control, conveniently positioned for ease of focusing control, conveniently positioned for ease of focusing from right to left side. Other features include: 15x eyepiece, diopter adjusting scale, corneal radius curvature, corneal refractive power and axis of corneal astigmatism scales and more. \$1,500.00

The Future Is now The Ophthalmic **Industry Is Going Digital And for** Good Reason.

1. Greater Efficiency & Accuracy.

- 2. Large Return on Investment.
- 3. Increased Capabilities, Integration & Connectivity.

Focus On The Patient. **Not Repetitive Data Entries**

- Dual cross cylinder
- Programmable sequences
- Wireless interface with pre-test equipment.

RC-5000 AutoRefractor/Keratometer Tomev

The RC-5000 is the newest generation of AutoRefractor/Keratometers. Features include automatic touch screen measurements and high-speed, built-in printer. The advanced touch-screen display allows you to perform both refraction and keratometry automatically with one simple movement. Capture the eye on the display by touching the center of the pupil with your fingertip and the RC-5000 will automatically align and begin measuring. The RC-5000 is equipped with ethermet C port for data transmission to a computer of refraction system. Contact Tomey for current pricing at (88) 449-4045.

RC-800 Auto Refractor/Keratometer

The TOMEY RC-800 AutoRefractor/ Keratometer was developed to satisfy all expectations. Features like color touch screen with auto shot function and a high speed printer make this device easy in handling as well as efficient and fast in operation. The RC-800 provides ease of operation with the incorporation of intuitive touch-screen operation which not only measures refraction and keratometry but also diameter measurement of the cornea and pupil. For refraction, fogging is applied automatically for each measurement for more accurate results. And keratometry measurements give you enough information for contact lens fitting. Contact Tomey for current pricing at 888-449-4045.

RT-7000 Tomey The 3-in-1 instrument with easy and speedy Includes built-in computer and on-board printer. Two CCD cameras are used to capture images providing highly accurate measurement data. Includes diameter measurement of cornea and pupil. The Indices of KAI and KRI that show Corneal Irregular Astigmatism are displayed with three levels (A_B_C) at Keratometry. Absolute and Normalized color maps can be viewed for contact lens fitting and Corneal Eccentricity Index of "Ortho-K Lens." Dry eye software inside.

Contact Tomey for current pricing at (888) 449-4045.
OM-4 Ophthalmometer

Topcon

A one-position instrument that quickly permits the examiner to obtain accurate and reliable information on the corneal radius of curvature. the refractive power and axis of principle meridians. One hand controls alignment and focusing while the other hand controls the horizontal and vertical displacement of the mire images. An extended measuring range from 5.5mm (60D) to 12.0mm (28D) is featured and corneal refractive power is 28D to 60D. Internal scales provide measurements in both mm and diopters. Test balls and a contact lens holder are standard accessories. 580mm h x 560mm w x 460mm d. 16ka. AC 100V. 120V, 220V and 240V with built-in transformer. 50/60Hz

Contact Topcon for current pricing.

LRK-7800 Auto Refractor/ Keratometer

U.S. Ophthalmic

The LRK-7800 combines the features of an auto refractor, auto keratometer, and aberrometer into one, convenient-to-use instrument. In Zernike Mode, the LRK-7800 generates a topographical map illustrating the degree of wavefront aberration. Besides the conventional data such as Spherical, Cylinder and Axis, the high order aberration data is measured for superior clinical decision-making. Point Spread Function and chart simulation also helps patients better understand the benefits of customized lenses. With the LRK-7800 patients also can compare the current, uncorrected view with the view corrected by AR measurement.

ERK-9000 Auto Refractor/ Keratometer

Quickly and accurately gather reliable pretest ing data with the cutting-edge ERK-9000 Autorefractor/Keratometer. Enjoy the flexibility of Bluetooth and remote connectivity with the entire Ezer Digital Practice line. Ezer digital practice platforms make it possible to perform a full digital vision exam, from pretest to Rx. The ERK-9000 offers your staff the opportunity to gather a wealth of precise information about the patient in one fast and easy test, making the remainder of your exam swift, simple and exact. In addition to the wealth of functions you'd expect from a topof-the-line autorefractor/keratometer, the ERK-9000 features auto-shoot programming, an illumination mode, IOL mode and so much more. ERK-9000......\$6,900

RK-9000.....\$6,900 Luxvision KR-800C Keratometer

U.S. Ophthalmic

The Keratometer KR-800C was developed under the guidance of the Ophthalmology and Optometry Center. This instrument gives a precise examination of the curvature radius of the anterior corneal surgace. This measure-ment is used to fit contact lenses and to monitor corneal changes produced by wearing contact lenses. The Keratometer is occassionally used to assist in the recognition of certain abnormalities and check the radius of curvature of both hard and soft contact lenses. The program is considerably easy to operate. This instrument can efficiently measure the curvature radius of the anterior corneal surface. One position measurement is not only more accurate but it is truly effective in reducing the measuring time. KR-800C.....\$\$1,495.00

PRK-7000 Auto Refractor/ Keratometer Veatch

The Potec PRK-7000 Auto Refractor/ Keratometer provides reliable and accurate measurements. The Auto Fire mode makes capturing data fast and simple. Redesigned with Color LCD touch screen and compact design for any practice. Efficient, Precise and Affordable! Contact Veatch for current pricing.

LASERS

57

Diode

VISULAS 532s Carl Zeiss Meditec

The VISULAS 532s combines ease of use efficiency and safety to provide ophthalmologists with an overall system sharply focused on the growing needs of both the office and operating room. The laser itself features a detachable touch screen control panel that allows for convenient placement within a crowded office or operating room. Years of research went behind the development of the control panel to ensure exclusive clarity and visibility, reduced reflections, intuitive onehanded control of all parameters, and the ability to be controlled in a sterile condition. The Laser Slit Lamp (LSL) with its precision electronic micro-manipulator, coaxially delivers the laser and illumination. The LSL is a parfocal system with spots ranging from 50 to 1000 _m. Energy density at the cornea is care-fully managed with the ParFocus_ design. The full line of accessories for the VISULAS 532s also include the VISULINK slit lamp adapter for both ZEISS and Haag-Streit slit lamps, LIO, endo-probes, adaptation to YAG, digital video adapters, and co-observation tubes. Contact Carl Zeiss Meditec for current pricing.

VISULAS 690s

Carl Zeiss Meditec

The VISULAS 690s laser provides superior ease of use, reliability and safety for administering PDT therapy for AMD. The laser offers computer aided spot size setting, automatic calculation of exposure time, user setting of controlled treatment. The VISULINK_PDT slit lamp adapter allows parfocal spot size settings of 500 – 6400_m. The laser and adapter are portable and set up quickly. In addition, the VISULAS 690s was the instrument of choice for the international phase III Visudyne clinical trials.

Contact Carl Zeiss Meditec for current pricing.

VITRA Solid State Green Laser Quantel Medical

Quantel Medical's Vitra has proven itself time and again to be the industry's most reliable and versatile solid-state photocoagulator. Vitra is small, lightweight (under 11 pounds) and portable- and is compatible with a full range of LIO's, silt lamp adapters and endoprobes. Due to its industrial-grade laser cavity, Vitra is offered with the longest warranty in the market today (5 years on the laser cavity). Contact Quantel Medical for current pricing 877-782-6835 or promos@quantelusa.com

The perfect answer for busy practices or physicians performing combined iridotomies, the VISULAS Combi is a compact laser slit lamp that combines both photodisruption (YAG) and photocoagulation (532). The Combi provides all the exclusive features characteristic of the ZEISS YAG and 532s systems. The YAG features include the high pulse frequency of 2.5 Hz for faster procedures, 4-point aiming beam for perfect targeting, anterior and posterior focus shift, finely-tuned energy dosage, and the Zeiss Super Gaussian mode for minimal energy exposure within the eye. This is incor porated with the 532 features of electronic micro-manipulator, parfocal 50-1000 _m spot sizes, the ParFocus cornea-energy manage ment system, and coaxial delivery of laser and illumination. Accessories include LIO, endo probes, digital video adapters, and co-obser vation tube.

Contact Carl Zeiss Meditec for current pricing.

Zeiss YAG III Carl Zeiss Meditec

The VISULAS YAG III is designed to provide maximum ease of use with the lowest possible amount of patient stress. Over twenty years of disruption legacy has resulted in arguably the gold standard in photodisruption. The high lights of the devise include: a high pulse fre quency of 2.5 Hz for faster procedures, 4-point aiming beam for perfect targeting, anterior and posterior focus shift, finely-tuned energy dosage, and perhaps most importantly the ZEISS Super-Gaussian mode. The Super Gaussian mode is a highly accurate bean profile that results in disruption (i.e. optical breakdown) in as little as 2.5 mJ in air (which is approximately 40% less than competition). The benefit to the doctor and patient is that a minimum amount of laser energy is needed to guarantee treatment. A full line of accessories is available, including adaptation to 532, digi tal video adapters, and co-observation tubes

Contact Carl Zeiss Meditec for current pricing.

The GDx is the imaging instrument of choice for early detection and management of glaucoma. It compares each patient's RNFL measurements to a large, age-stratified, multiethnic normative database, and also has a unique Nerve Fiber Index (NFI) generated by neural network techniques to determine the likelihood of glaucoma. Because it analyzes a wider area around the optic disc, it is less affected than other instruments by variations in disc size. It is very easy to operate and has highly repeatable measurements even between operators, making it ideal for tracking small RNFL changes over time. The GDx is fast, never requires dilation, and features a highly intuitive graphic printout that is easily explained to patients. Contact Carl Zeiss Meditec for current pricing.

As with all of the Optos UWF devices, both Daytona and Daytona plus provide eyecare professionals with UWF digital images of 200 degrees or up to 82% of the retina in a single, non-contact optomap image. In addition, the Daytona plus device comes with the OptosAdvance™ browser-based image review software, which allows for simple documentation, monitoring and referral processing to assist in patient management and improved patient flow.

Features

 Non-mydriatic ultra-high resolution images in under a second, through 2mm pupils

 Four image modalities available; 3-in-1 color depth imaging, green laser view ("red-free"), red laser view and autofluorescence (af)

 All images presented in ProView[™], displaying optomap images in a consistent geometry which accurately represents anatomical features in the retina and enables automatic image registration for tracking over time and inter-modality image comparisons

• Daytona plus has new hardware which enhances the resolution in superior and inferior fields.

 Inclusion of the innovative OptosAdvance review software that simplifies workflow while enabling comparison overlay between image modalities and different dates, over time. OptosAdvance is also available for Daytona devices.

AO Radiuscope Belrose

A necessity for the accurate measurement of the concave and convex base curves of contact lenses. Monocular model with internal 100V, 120V, 230V; Weight 6,600 grams; size:

eading and fine and coarse adjustments Completely refurbished to ensure long life operation. 10lbs. 17.25" (H) x 6" (W) x 13" (D), 115V. 60Hz.

Contact Belrose for current pricing. **Contact Lens Measuring Magnifier**

7X magnification with metric scale, precisionground, distortion-free, optical-quality resin lens. Case included.\$55.00 Contacto–Gauge CGX-3

S & L Optics

Accurate measurement of contact lens base curve with digital readout. Digital type radiuscope that measures base curve in 0.01mm increments. The zero reset button is conveniently located near the focusing knobs. All cords and wires are contained within the unit and are not visible on the outside. The transformer is built in to conserve valuable table space, and the unit is equipped with dual knobs for coarse and fine focusing. Monocular microscope with 45° inclination. PD adjustment from 55 to 73mm. Magnification is 75X standard (100X option). Range of measure-ment: 0-24mm, 3 step brightness control; 100V, 120V, 230V; Weight 6,100 grams; size: 425mm h x 175mm w x 240mm d. Complete with 7.5mm test ball, eyeshields, spare lamps, concave and convex lens mounts. Contact S & L Optics for current pricing.

Contacto-Gauge CGX-4 S & L Optics

Accurate measurement of contact lens base curve with digital readout. The ultimate radiu-scope for the practitioner who won't settle for less than the best. Digital type radiuscope that measures base curve in 0.01mm increments. The zero reset button is conveniently located near the focusing knobs. All cords and wires are contained within the unit and are not visible on the outside. The transformer is built in to conserve valuable table space, and the unit is equipped with dual knobs for coarse and fine focusing. Binocular microscope with 45° inclination. Magnification is 75X standard (100X option). Range of measurement: 0-24mm, 3 step brightness control;

425mm h x 175mm w x 240mm d. Complete with 7.5mm test ball, eyeshields, spare lamps, concave and convex lens mounts. Contact S & L Optics for current pricing.

Contacto-Monitor CL-S S & L Optics

Stereo microscope for checking contact lenses with ease. Dark ground illumination enables clear view of scratches and deposits of all types of lenses. Specially designed ringshaped lens support enables inspection of high water content lens of ultra thin lenses without distorting the shape of the lens. Tweezer type lens support facilitates edge inspection of hard lenses and magnification can be switched over from 10X to 20X by rotation of objective lens cover. The brightness can be controlled continuously and the dark ground illumination can be switched over to oblique illumination and vise-versa by means of switch. Evepiece inclination: 45°: magnification 10X & 20X; visual field: 18.0mm at 10X and 9.0mm at 20X; Size: 410mm h x 160mm w x 225mm d. Weight: 4,600 grams.

Contact S & L Optics for current pricing.

Contacto-Monitor CL-TV S & L Optics

Quick and easy detection of flaws, scratches, deposits, etc., on both hard and soft lenses. The CL-TV is a new type of contact lens inspection system that employs a specially designed illuminated system. The operator may use either darkground or background illumination, or both illuminations simultaneously. The light amount for each illumination can be adjusted independently of each other which allows the operator to get the ideal illumination for his or her operation. The unit comes with a video signal output terminal for connection to video peripherials such a monitor, TV, video printer or computer. 1/3" color CCD video imager. Horizontal resolution of 470 lines. 6:1 zoom lens with a magnificaton of 9-54X when used with a 14" monitor. LED background illumination and Halogen lamp (10W) for the darkground illumination. size: 180mm h x 340mm w x 430mm d without monitor. AC 120V or 230V, 50/60Hz, 50VA; weight: 9.0kg. Call S&L Optics for monitor selections and other options.

Lensmeters

B&L Model 70 Vertometer Belrose

The world's most trusted vertometer! American lined target with external reading, precise ink marking device, durable adjustable lens stage, stainless steel efficient lens holder. The large power drum on the right side allows easy, critical control of the power setting to 20D. The cylinder axis drum on the left is marked 0° to 180° and facilitates locating the lens axis with the eyepiece reticle lens, prism power can be measured directly from 0.25 to 5.00, and to locate prism base - apex line. This instrument used for offices or labs worldwide, and considered by many the best ever. These B&L Vertometers are completely refurbished by Belrose Refracting Equipment Company to ensure long life operation. 29lbs. 16" (H) x 7" (W) x 21" (D). 115V. ontact Belrose for current pricing.

Belrose Lensmeter Model Bel-101 Belrose

High quality lensmeter that you could be used in both laboratory or office settings. Has American cross lived target, prism compensator with ink marking device the oversized lens table permits the measurment of lenses from 30 to 90mm in diameter. The external power wheel has a range from 0 to 20 dioptors in plus and 0 to 19 dioptors in mini. This deluxe unit features a full 90 degree inclination enabling the measurement of contact lenses when used in the vertical postion. Axis from 0 to 180 degrees in 1 degree increments. Belrose Lensmeter Model Bel-101...... \$995.00

accurate measurements of progressive lens. Feel the difference and provide patients with exact UV protection figure using the UV assessments. Take advantage of this high quality product at an affordable price.

 More efficient Progressive Measurement: Hartmann sensor with multiple measurement points guarantees reliability and stability. The auto adjustment of LED brightness depending on the detected the intensity on the sensor provides more accurate measurement of high diooter lens.

 Green LED: New optical system with green LED (546nm, e-line) provides more accurate measurement result without Abbe value compensation.

 Newly Designed PD Bar & Measurement Nose: The newly designed PD Bar and Measurement nose can measure small, progressive or multi-focal glasses. In addition, the operator can still use the measurement nose when measuring the near sight addition.

 Incomparable UV measurement Level Assessments: Few lensmeters provide UV assessments with the exact numerical value. Feel the difference and provide patients with exact UV protection figure.

 Built-in Thermal Printer: Print paper can easily be changes with one-touch lever. Illustration of Axis & PD helps customers to understand the data better. \$2400

HLM 7000 Digital Lensmeter

Coburn Technologies

The compact Huvitz HLM-7000 Digital Lensmeter offers more space and freedom with the tilting function. Newly designed user interface and algorithm provide quick and accurate measurements. Progressive lenses are detected with ease, and far or near sight addition are automatically calculated with precision and speed. The Huvitz HLM-7000 Digital Lensmeter can simultaneously capture the PD of frames and power of lens with high fidelity. Features include:

• Extensive diopter measurement

- Choice of 5 or 10 prism display for better viewing of low, normal and high prism areas
- Automatic detection of progressive lenses and size
- UV measurements to an exact value
- Built-in printer with one-touch control
- Bailt in printer man ene toden ee
- Dark sunglasses mode
- Adjustable TFT LCD w/ LED backlight display

Network connectivity
Contact Coburn Technologies for current pricing.

Lensmeter HLM-1 Coburn Technologies

effective and equipped with one of the fastest & most accurate measurements. We pride ourselves in offering affordable & reliable equipment while providing optimal service to customers especially after a purchase.

Features:

- Hartmann Sensor Wavefront Analysis
 Technology: More measurement points than
 previous generations.
- Expanded prism measurement: Up to 20_ measuring from all directions BU, BD, BI, BO.
- Easily measures darkly-tinted/mirrored sunglasses: Automatically amplifies amount of light & calculates refractive power without manual configurations.
- Meets/exceeds Medical Equipment Certificate, Class B standard.
- Slim and compact design: Perfect for small spaces.
- Auto lens recognition including single vision and progressive lenses.

 Improved progressive (multifocal) lens measurement: measures fast and easy by moving target & following guides on screen.

• Bright, stress-free, and user-friendly interface.

 7" color and high resolution LCD screen features an anti-glare and hard coating produces sharp images and a scratch resistant screen.

• Enhanced camera performance provides faster responses when measuring refractive power & improved lens detection.

• High speed (processing speed per frame: 65ms) with more frames per second (15FPS).

 Newly designed nose cone & lens support allows the user to measure smaller frame styles with ease.
 Contact Cohum Technologies for current pricing.

Long considered the standard of the industry the NEW LM-101 Marco Lensmeter now offers an LED illumination system which provides efficient, consistent, illumination levels. The NEW 101 is also powered by a convenient AC adapter, OR can be battery-operated by a standard D-cell battery system. The 101 is a classic design with solid, durable construction utilizing brass and stainless steel components to help prevent premature wear and mainte nance. A discriminating optical system combined with an American style cross-line target produces clear, crisp images. Other notable features on the 101 are a full 90-degree adjustable inclination, a standard prism compensat ing device, power wheels located on both sides of the instrument, and self-inking mark ing pens that eliminate mess.

Coburn's HLM-1 Lensmeter is a great option ing pens that eliminate mess for eye care professionals because it's cost Contact Marco for current pricing. ML1 Manual Lensometer

LENSMETERS & GAUGES

Reichert's ML1 Lensometer is easy to use and has numerous features for reliable performance. The ML1 enables accurate measurements of a variety of lenses including single vision, multi-focal and contact lenses. The ML1's LED light source ensures that bulbs will never have to be changed. Its glare-free, green illumination and sharp mires make measurements simple and quick.

Please visit www.reichert.com to request a quote.

LM-15D Lensmeter SNC

Portable, lightweight cordless lensmeter. It features an American style target available with or without prism compensator. Lamp replacment is eliminated by LED light source. Automatic power shut off to maximize battery life. Can be clamped at any angle from 45° to 90° allowing measurement while in a comfortable position. Accessories include a hard contact lens measuring adapter.\$990.00

Lensmeters

LM-8 Lensmeter

The LM-8 lensmeter features a traditional cross-haired target and LED illumination which provides major benefits over lensmeters with standard illumination. LED illumination provides a clearer, brighter target image for easier lens measurement. Wide diameter evepiece provides a sharp target image for comfortable operation. Compact design and battery power source with an automatic sleep feature help optimize the functionality of any workspace. New style ink cartridge provides clear marking, even on coated lenses. 310mm h x 160mm w x 420mm d. 4.5kg., 10lbs. Two D-cell batteries or 6V AC adapter. Contact Topcon for current pricing.

ELM-9000A Digital Lensmeter U.S. Ophthalmic

The FLM-9000A simplifies and modernizes lensometry. You and your staff will appreciate the many benefits of automation advanced features when selecting the ELM-9000A. This high-tech lensmeter features outstanding functionality, tremendous versatility and speed. Whether you're measuring single vision lenses, sunglasses, progressives or contact lenses, this advanced automatic lensmeter won't disappoint. The intuitive fullgraphic LCD touch screen guides operators through the process, reducing stress and errors. The ELM-9000A features auto detection of progressive lenses, an easy-to-replace lens marking unit, a built-in printer, and so much more. ELM-9000A ...

......\$1,700 ELM-9000C Digital Lensmeter U.S. Ophthalmic

If you are looking for the latest technology, the ELM-9000C does it all. The ELM-9000C simplifies and modernizes lensometry. This hightech lensmeter features auto detection of LM-300......\$678.00

progressive lenses, an easy-to-replace lens marking unit. UV measurement, a PD measure that detects movement, a built-in printer, and so much more. Whether you're measuring single vision lenses, sunglasses, progressives or contact lenses, this advanced automatic lensmeter won't disappoint. You and your staff will appreciate the many benefits of automation and advanced features when selecting the ELM-9000C. Outstanding functionality, tremendous versatility and speed make this a truly special device.

ELM-9000C \$2,100 GLM-7000A Digital Lensmeter

U.S. Ophthalmic

With the GLM-7000A you can automatically measure all lens types using an advanced algorithm that allows for improved accuracy and speed. The unit also features an extensive diopter measurement range and two separate prism modes. A dark sunglass mode and an intuitive icon-based graphic interface are among the several specialty features that you will enjoy when selecting this high-tech unit. Despite it's long list of extras, the GLM-7000A won't take up much space. It features a compact design that rivals all other units in its class

GLM-7000A\$1,956.00 **GLM-7000C Digital Lensmeter**

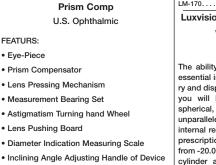

U.S. Ophthalmic

With the GLM-7000C you can automatically measure all lens types using an advanced algorithm that allows for improved accuracy and speed. The unit also features an extensive diopter measurement range and two separate prism modes. A built-in PD sensor, exact UV level assessment, and the ability to measure even very small progressives combine to make the GLM-7000C stand out from other units. A dark sunglass mode and an intuitive icon-based graphic interface are other specialty features that you will enjoy when selecting this high-tech unit. Despite it's long list of extras, the GLM-7000C won't take up much space. This high-quality automatic lensmeter is an exciting yet practical choice at an incredible value.

GLM-7000C\$2,257.00 GLM-8000 Digital Lensmeter U.S. Ophthalmic

This new generation of auto lensmeter is based on Hartmann Sensor technology. It offers advanced simultaneous measurement of 108 points, providing a faster measurement with greater accuracy and complete reliability. Your staff will obtain accurate lens measurements every time. The GLM-8000 pro vides comfortable viewing and operation with its adjustable, tilting color LCD screen. Users simply touch the LCD screen to perform measurements. Operation couldn't be easier or more convenient. With automatic progressive measurement, high-speed UV testing, and a built-in printer, this Gilras model is an excel lent choice in virtually any setting. GLM-8000\$1,943.00

LM-45 Portable Lensmeter U.S. Ophthalmic

If you're making house calls or seeing patients in institutional or other out-of-office settings, a portable lensmeter is a "must have." No matter where you are, the ability to perform manual lensometry is essential. Fortunately, with Luxvision's LM-45, traveling with a lensmeter is easy. The desk-type unit and case is lightweight and operates on standard AA batteries

U.S. Ophthalmic

The LM-700 is Luxvision's compact, deluxe model Manual Lensmeter. One of the many features that set this model apart is its ability to measure hard and soft contact lenses as well as spectacle lenses. In addition, this model offers an oversized lens table that allows you to measure conventional lenses from 30 to 90 millimeters in diameter. The LM-700 provides the reading of the power on the outside of the unit and features outstanding halogen illumination. The ability to perform manual lensometry is essential in every eye care practice, laboratory and dispensary. Thanks to the Luxvision LM-700, you can now comfortably measure spherical, cylindrical and prism powers with accuracy and ease. LM-700.....\$834.00

LM-7800 Digital Lensmeter U.S. Ophthalmic

If you're looking for a high-tech lensmeter with incredible functionality. look no further than the LM-7800. This advanced automatic lensmeter offers tremendous versatility and speed when measuring any time of lens, including sunglasses, progressives and contact lenses The Hartmann sensor uses multiple measurement points, eliminating accuracy concerns. Your staff will obtain accurate lens measurements every time. The unit's high-resolution LCD guides operators through the process, reducing stress and errors. The LM-7800 offers cutting edge technology at an extremely competitive price.

LM-7800.....\$2,405.00 Luxvision LM-170 Manual Lensmeter

with External Reading

U.S. Ophthalmic

The ability to perform manual lensometry is essential in every eye care practice, laboratory and dispensary. With the Luxvision LM-170, you will be able to comfortably measure spherical, cylindrical and prism powers with unparalleled accuracy. This external lensmeter covers a wide range of prescriptions, with vertex powers ranging from -20.00D to +20.00D, up to 180 degrees of cylinder and 5 prism diopters. The light source is LED. Luxvision LM-190 Manual Lensmeter with External Reading

U.S. Ophthalmic

The ability to perform manual lensometry is essential in every eve care practice. laboratory and dispensary. With the Luxvision LM-190, you will be able to comfortably measure spherical, cylindrical and prism powers with unparalleled accuracy. This external lensmeter provides the reading of the power on the outside of the unit. An enhanced lens marking device, prism compensator, gentle lens pressing unit, inclination control and more combine to make the LM-190 a wise choice.

Luxvision LM-200P Manual Lens Meter of Internal reading

Manual Lensmeter of internall reading

This device is suitable to test the diopters of spherical lenses of ophthalmic lens or cylindrical lens, diopter, axis(axle) of astigmatism of cylindrical lens, diopter of the prism and diopter of the cornea - contact lens

PRISM COMPENSATOR

A prism compensator is useful when dealing with a prismatic lens from 5^Δ prism diopter. There are 2 scale lines on the prism compensator. The upper lines of the prism shows the angle (from 0 to 180 degrees), and the lower line shows the prism diopter.

Its range is 15 ~0~ 15.

Characteristics :

The ocular one is provided with a unit of approach which range of approach is of + 5D to be adapted to the different visions of the different operators.

The retcle is divided with the scale of measurement and the dividing disc of the degree of the prism.

The entire degree of the prism is read directly of the scale of measurement and of the decimal scale estimated according to the degree on the scale of measurement.

When prism diopter is great than 5[^], use of prism compensator is necessary. There are 2 scale line on the prism compensator: the upper line denotes angle, with the range of 0° - 180°, minimum scale value of 5°; the lower line is the prism diopter with a range of 15[^] - 0 - 15^

MICROSCOPES

64

OPMI® VISU 140

OPMI® VISU 140 makes a concerted effort to deliver the basic functions necessary for efficient cataract surgery. The main lens and zoom optics are apochromatically corrected, the co-axial illumination provides an excellent red reflex and the integrated UV filter delivers optimum protection to the patient. Its easy to use controls make the OPMI® VISU 140 the system of choice for out-patient hospitals, for small clinics or for laser centers that would like to expand their range of services to include cataract treatment. Last but not least, the economical entry price perfectly fits into any investment budget. Contact Carl Zeiss Meditec for current pricing.

OPMI® VISU 160 Carl Zeiss Meditec

The new OPMI® VISU 160 is the multi-talented member of the ophthalmic surgery team. The universal system is ideally suited for procedures on both the anterior and posterior segments of the eye. The DeepView depth of field management system enables adjustments to the microscope image - optionally with optimized depth of field or maximum light transmission and resolution. The integrated slit illumination can be ideally used, for example, as retro-illumination during lens extraction. Brilliant images become visible through the microscope thanks to the apochromatic zoom optics. Maximum contrast and excellent detail recognition are additional catchwords that describe the high standard of the OPMI® VISU 160.

Contact Carl Zeiss Meditec for current pricing. **OPMI® VISU 210**

The OPMI® VISU 210 surgical microscope was designed for the highest level of ophthalmic surgery. The optical and technical configuration supports the surgeon during all procedures on the eye - from cataracts to surgery on the posterior segment. With the new Superlux™ Eye xenon illumination, the OPMI® VISU 210 provides a white light that Contact Topcon for current pricing.

meets even the highest demands. The result is a bright, high-contrast image with natural color. A unique assistant's microscope and almost weightless positioning due to magnetic locking brakes complete the system. DeepView to optimize depth of field and slit illumination are also standard with this system.

Contact Carl Zeiss Meditec for current pricing. Surgiscope III Marco

Perfect for in-office operations. A small portable unit with excellent optical capabilities that are necessary for microsurgical techniques. Its list of features includes a built-in three-step magnification drum, motorized focusing, coaxial illumination and a variety of optional accessories such as a photo kit, assistant scope, height extender, straight binocular, slit illuminator, bleak illuminator, video kit and beamsplitter. Mounting options include a wall mount, table mount floor stand, or a unique new unit mount which turns an instrument stand into a "surgery station." A unique stabilizing system insures steady positioning of the counterbalanced arm during operation. Eye Point height: 37.79" to 53.54", Base: 23.62"w x 22.04"l. 121lb. with floor stand. Contact Marco for current pricing.

OMS-90 Operation Microscope Topcon

The OMS-90 Operation Microscope is the newest standard for versatile microsurgery. The instrument incorporates many features and benefits of our former OMS-75/85 lineup with added conveniences and improved image clarity, depth and resolution. The newly designed optical system provides crystal clear viewing for observation and microsurgerv. The standard 200mm objective lens includes an improved depth of focus for more comfortable procedures. The standard PD adjustment knob, water-repellent coated f=200mm objective lens, five-step magnification and compact footprint makes the OMS-90 ideal for smaller treatment rooms. Optional X-Y translator available, 740mm (H) x 1,520mm (D). 72kg. AC100, 120, 220, 240V, adjustable.

SP-1P Specular Microscope

Topcon

Designed to photograph and analyze the corneal endothelium, the fully automatic SP-1P Specular Microscope with "Panorama" function can capture an area 2.6 times larger than the conventional capture field. Its compact footprint and rotatable control panel save time and space. The incorporated firmware provides cell density, corneal thickness, percentage of hexagonality and more. Topcon's compact approach makes the SP-1P the next generation in Specular Microscopy. Contact Topcon for current pricing

PACHYMETERS

66

OCULUS Corvis® STL Tono/ Pachymeter Oculus

The OCULUS Corvis® STL is a breakthrough in the IOP measurement. Equipped with an ultra-high-speed Scheimpflug camera, this advanced diagnostic device records the reaction of the cornea due to an air pulse and precisely measures the corneal thickness and the intraocular pressure. EMR ready.

Contact sales@oculususa.com for pricing. Pocket II Precision Pachymeter Quantel Medical

Precision for Glaucoma Screening! The Pocket II Precision Pachymeter fits in the palm of your hand or your labcoat pocket. Move it between exam rooms or take it to your remote clinic. It records from 1-10 measure-ments & automatically displays the average and standard deviation. Measurement range of 200 to 999 microns & accuracy of +/- 5 microns. With built-in test block (eliminates lost test blocks) powered by 4 AA (LR6) batteries (or optional A/C adapter), you've got "pachymetry to go." Electronic Patient Data Storage and Networking Capabilities: All Quantel Medical Ultrasound systems can send data directly to a network (LAN) through our optional Visuscan Data and Archiving Kit with Laptop. This system can also be utilized to store patient data directly on a laptop or PC for later retrieval. Call us for more information. Contact Quantel Medical for current pricing 877-782-6835.

and IOP calculators. Weighing in at 19 ounces, the SP-100 is equipped with a built-in rechargeable battery for wireless operation. The TOMEY quick, highly accurate, effortless measurement system allows measurements without looking at a display.

Contact Tomey for current pricing at (888) 449-4045. SP-3000 Pachymeter

Tomey

The TOMEY SP-3000 Pachymeter color LCD touch screen makes patient selection, reading selections & mapping as simple as one touch. With tone-assisted measurement and auto averaging of up to 20 readings per location, the result of ten discreet points or up to 25 map points can be displayed, stored and/or printed for both OD & OS. Up to 6 patients data can be stored in the internal memory of the SP-3000. Results can be displayed for each patient for the right eye or the left eye; stored for each patient in the optional 512Kb (up to 1,000 exams) memory card; or printed with the built-in printer, either as single points or as a map.

The SP-3000 is very flexible with operator adjustable bias & velocity & three measurement ranges: 150-350um, 300-1000um, & 900-1500um.

PERIMETERS 67

Automatic Perimeters

Humphrey® FDT™ Visual Field Instrument

The Humphrey FDT Visual Field Instrument, with patented Welch Allyn® Frequency Doubling Technology, provides the eye care professional with a rapid, clinically verified and affordable method of detecting visual field loss. With minimal set-up time, and test times as low as 35 seconds, the Humphrey FDT is fast enough to screen all of your patients without disrupting your business. For positive screening results, FDT threshold tests provide additional diagnostic information. Contact Carl Zeiss Medite for current pricing.

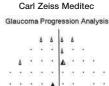

Humphrey® Field Analyzer II-i Series

The HFA II-i series is the premier automated perimeter for examining a patient's visual field. SITA™, cuts testing time in half with no loss in reproducibility. A video eye monitor enables the operator to align and track patient eye position, and gaze tracking offers a patented, high precision system that, for the first time, differentiates between head motion and gaze errors. Included on all HFA II-i systems is STATPAC2, the language of perimetry that is accepted worldwide. Optional features include SWAP testing for early detection and the enhanced Humphrey® Glaucoma Progression Analysis™ software for easy identification of disease progression.

Contact Carl Zeiss Meditec for current pricing.

Humphrey® Glaucoma Progression Analysis™ Software

Likely Progression

Humphrey Glaucoma Progression Analysis Software (GPATM) software quantifies the effects of variability, and tells doctors when Contact Carl Zeiss Meditec for current pricing.

the results exceed even the largest expected variability. The new software applies knowledge gained from a multi-center clinical trial, in which the actual test-retest variability of hundreds of glaucoma patients was measured. By accurately and objectively identifying progressive visual field loss in glaucoma patients, the Humphrey GPA software helps practitioners make better treatment decisions. *Contact Carl Zeiss Meditec for current pricing.*

Humphrey® Matrix[™] Visual Field

Instrument

Carl Zeiss Meditec

The Humphrey Matrix Visual Field Instrument with patented Welch Allyn® Frequency Doubling Technology provides the eye care professional with an ideal tool to detect and characterize visual field changes for basic glaucoma management. The Humphrey Matrix provides the speed, and ease of use you expect from frequency doubling technology. Full threshold test strategies include up to sixty-nine, 5° x 5° frequency doubled stimuli that localize and fully characterize visual field defects. In addition, the STATPAC-like analysis provides doctors with familiar tools to make confidant diagnoses.

Contact Carl Zeiss Meditec for current pricing

PreView PHP - Preferential Hyperacuity Perimeter Carl Zeiss Meditec

The PreView PHP™ is a diagnostic instrument for early detection of neovascular ("wet") Agerelated Mascular Degeneration. The PreView PHP is a patient-interactive visual field test that identifies retinal pigment epithelium elevation consistent with the conversion from dry to wet AMD, often before obvious signs or symptoms are present. Regular monitoring with the PreView PHP allows early detection and referrals, which are critical to maximize treatment benefits and prevents vision loss. Octopus 600 Haag-Streit USA

The new Octopus 600 provides one device for Pulsar (early detection of glaucoma) and white/white (progression of disease) allowing for the most important aspect of perimetry: Better patient care.

- •TOP thresholding in under 3 minutes per eye
- G or 32 program in Pulsar and White/White
- . 24-2, 10-2 and Macula also in White/White
- Networked via EyeSuite Software Operation
 ... Fixation Control with Forehead Sensors

Contact Haag-Streit USA for current pricing.
Octopus 900 Universal Perimeter

Haag-Streit USA

Octopus 900 Basic

The Octopus 900 Series (Basic and Pro) provide the most technologically advanced system for accurate and reliable visual fields. Featuring cutting edge technology combined with innovative testing methodologies Octopus perimeters meet and exceed your technological expectations.

- True 90 Degree Goldmann Bowl
- Static White /White, Blue/Yellow, Flicker, Red/White, Low vision

PERIMETERS

Automatic Perimeters

Heidelberg Engineering Perimeter

(HEP)

Heidelberg

2-in-1 perimetry with the Heidelberg Engineering Perimeter (HEP) offers the appropriate stimulus for different stages of disease. The Flicker-Defined Form (FDF) stimulus is designed to detect visual field loss in patients with early glaucoma while Standard Automated Perimetry (SAP) is best suited for patients with moderate to severe progressive glaucoma.

The HEP is a monitor-based perimeter that offers a full set of standard visual field tests for the central 10°, 24°, and 30° as well as an extension to the periphery up to 60°. It uses three different kinds of Adaptive Staircase Thresholding Algorithm (ASTA) strategies to cover a broad range of applications. The HEP also offers a 30-second screening strategy to balance the demand for a quick visual field assessment with the need for sufficient accuracy in a busy practice.

Contact Heidelberg for current pricing

OCULUS Centerfield® 2 Perimeter

Oculus

The OCULUS Centerfield® 2 is a Goldmann standard perimeter. It is capable of 70° static and kinetic visual field testing and color perimetry. With the new SPARK strategy, the threshold perimetry with the Centerfield® 2 takes only 3 min. The popular suprathreshold. fast threshold and full threshold tests and the 30-2, 24-2, 10-2 grids plus customizable patterns are available. The Centerfield® 2 comes with the Glaucoma Staging Program (GSP). Threshold Noiseless Trend (TNT) progression analysis and the new SPARK Light strategy. EMR ready.

Contact sales@oculususa.com for pricing.

This compact Goldmann standard perimeter is capable of screening and full threshold visual field exams out to 30 degrees. With the new SPARK strategy, the threshold perimetry with the Easyfield® takes only 3 min. The popular suprathreshold, fast threshold and full threshold tests and the 30-2, 24-2, 10-2 grids plus customizable patterns are available. The eye shields eliminate the need for the eye patch and the new vertically adjustable chinrest offers maximum patient comfort. The Easyfield® comes with the Glaucoma Staging Program (GSP), Threshold Noiseless Trend (TNT) progression analysis and the new SPARK Light strategy. EMR ready.

Contact sales@oculususa.com for pricing. EPR-1800 LED Perimeter

U.S. Ophthalmic

Detecting and measuring field loss requires a dependable platform to guide decision-mak-ing and patient care. With the EPR-1800 you will have access to a range of testing parameters as well as highly advanced progression analysis software. Select and customize reports with a variety of analysis report options. The ability to generate past and current records in a single report is an especially useful function. Operators will appreciate the benefits of real-time eye monitoring with the EPR-1800, which allows for enhanced fixation control throughout testing. The EPR-1800 truly offers outstanding glaucoma screening, diagnosis tools, allowing you to treat and manage patients with confidence.\$11,000 EPR-1800

EPR-2600 Projection Perimeter U.S. Ophthalmic

Reliable perimetry is the cornerstone of glaucoma screening, diagnosis, treatment and . Red on White test for Toxic Vision Loss

ongoing management. With the introduction of the EPR-2600 you will enjoy the highest, most respected level of technology at an incredible value. This highly advanced projection-based system allows for scatter-free, even light and a complete reduction in chromatic aberration. Furthermore, the range of testing protocols and parameters is certain to impress and allows for both static and kinetic testing. With advanced analysis software and complete report plot selection, the will exceed the expectations of even the most discriminating buyer.

EPR-2600.\$15,600 **EPR-3600** Projection Perimeter

U.S. Ophthalmic

This highly advanced projection-based system allows for scatter-free, even light and a complete reduction in chromatic aberration. Furthermore, the range of testing protocols and parameters is certain to impress and allows for both static and kinetic testing. With the EPR-3600, users can select stimulus colors: red, white and blue are all built into this outstanding testing unit. In addition, the EPR-3600 offers blue-yellow detection. Reliable perimetry is the cornerstone of glaucoma screening, diagnosis, treatment and ongoing management. With the introduction of the EPR-3600 you will benefit from flexible testing to meet the needs of even your most complex cases.

The PTS 1000 Automated Perimeter is a modern diagnostic instrument for quick, precise testing for field of vision. The closed type examination bowl provides a single solution for Goldmann kinetic and static perimetry. Wide range of strategies/analysis tools combined with intuitive interface.

- Static/Kinetic testing
- Goldmann stimuli sizes I.II.III.IV.V
- · CCD camera alignment view on PC screen with motorized patient chinrest
- Trial Lens Software Calculator, Moveable Trial Lens holder arm/Myopic/Hyperopic Trial Lens set
- Field tests: Macula 10, 24-2, 30-2, Central 30, Glaucoma 30, 50° and more
- Test strategies: Screening, Advanced Accurate/Intermediate, Fast/Full Threshold
- SWAP Test (Blue on Yellow), Foveal Threshold Test

· Absolute Defect, Total Deviation Probability/ Pattern Deviation/Probability from Age Normative

- Mean/Pattern Defect, Mean Deviation and Pattern STD Deviation
- Bebie Curve
- · Reliability indices include False positive/ negative. Fixation errors
- Industry standard printouts, JPG, PDF
- Print manager
- Network capable software

PC based software with MS Windows system contains powerful analysis tools and precise threshold algorithm. Includes extended comparison module and customizable settings. No charge for networking software.

Printout Manager module uses predefined template or custom printouts, depending on your organization needs. The custom option may vary from choosing the content to the layout style. Contact Veatch for current pricing.

Manual Perimetry

Head & Chin Rests Richmond

transparency glass lens pieces with plus and minus cylinders secured in metal or anodized color aluminum rings. Each set is handcrafted with optically true lens centers. The removable tray comes with metal handles for ease of use and has diopter indicators. The case comes in leatherette or black aluminum with two combination locks for security. In its center there is a slit, through which light can pass while it can not pass through any other part of the lens. By turning this lens in front of the eye, astigmatism can be examined as vision changes for better or worm at a certain axis position. on the other hand. it proves no existence of astigmatism if vision does not change.

Price: \$690.00 - \$790.00

Luxvision TL-68 Trial Lens Set U.S. Ophthalmic

This Luxvision Trial Lens set has 68 glass lens pieces of wich 12 pieces are minus cylinders secured in metal rings. The curved surface forms a part of the spherical lens and the dioptric power on all axis positions is the same. After passing through the lens, the light beam focuses on one point (or a virtual focus). Spherical lenses includes concave lenses (-) and convex lenses (+). Which are used to examine myopia, hyperopia and presbyopia. The curved surface forms also a part of the cylindrical lens and the dioptric power on all axis positions is not the same. After passing through the lens, the light beam focuses into a straight line (or a broken line). Cylindrical lenses consists of concave cylindrical lenses and convex cylindrical lenses that are used to examine astigmatism

Price: \$204.00 (-) Cylinder \$205.00 (+) Cylinder

Perimeter Accessories

Belrose Perimeter Trial Lens Set Belrose

This all new trial set is designed especially for trial lens holders in fields and perimeter instruments by providing a great selection of the following 80 full field lenses. A quantity of 28 plus and minus spheres from 0.25 to 16.00 and a quantity of 12 plus and minus cylinders from 0.25 to 5.00. A truly unique trial set that has wooden red velvet lined "removable tray" that measures only $9-716" \times 9-716" \times 1-716"$ then lodges into a black case that measures only $9-716" \times 2-3/8"$. Take it home to check family members or an occasional nursing home visit.

ues of spheres and cylinders needed for use with your perimeter instruments. Each set contains 28 plus and 28 minus spheres from 0.25 to 16.00 and 12 plus (or choose plus cylinders) cylinders from 0.25 to 5.00.

Great for field refractions at nursing homes, hospitals, schools and satellite clinics. There is no need to have a complete set next to your analyzer, nor should you have to run back and forth to your exam room to use the trial lenses from your full set. Why risk having key lenses in your pocket when you leave the office? Values marked on each lens and in silver on black for easy identification in reduced light in the box.

The footprint of this convenient reduced lens set is only 9.5" (24 cm) square. Choice of a set with either minus or plus cylinders

6858xx Special Order 54 Prisms ONLY Set, in pairs, -0.12 to 10 Diopter with a case.....\$199

6859xx Trial Lens Set, 68 Perimetry (Plus Cylinder)\$175 6860xx Trial Lens Set, 68 Perimetry (Minus Cylinder). \$175

New small trial set perfect for rounds, nursing homes, externships, visual field machines and screenings! 91 total lenses including 68 spheres starting with +/- .25 and goint to 10 diopters. 16 minus cylinders to 3.0 diopeters. One .50 cress (flip) cylinder. Lenses are etched on BOTH SIDES with the power and plus lenses have rounded handlges while the minus lenses have square handles making it impossible to mix them up! Removal tray, leather lockable case and large micorfiber cleaning cloth make this set simply the best small set on the market today. Trial frame available as an option.

CP-770 Advanced Automatic Chart Projector

Marco

Marco's new CP-770 Advanced Automatic Chart Projector combines all of the sophistication and efficiency of our previous model, including two new ETDRS LogMar acuity charts. By providing the option of programming up to 33 total charts in any order you wish, the CP-770 allows you to conduct an examination in a darkened room simply by pressing one button on the remote control each time you want to move to the next chart. Sophisticated masking features allow you to isolate and maneuver individual horizontal or vertical lines and individual letters, numbers and characters. You also have your choice of special polarized tests as well as a Red/Green slide and filter. All of these selections are immediately accessible at the touch of a button. The standard selection of 33 charts include not only the ETDRS, but a wide variety of Snellen, illiterate E's, numbers, pediatric, and special testing charts. To eliminate patient memorization, the CP-770 includes 10 selectable 20/20 lines, and additional 20/10 and 20/15 lines for the more discriminating refractive surgery patients. Also standard is a proprietary internal brightness control that allows you to adjust the brightness intensity of the projected image. The CP-770 incorporates an LED illumination system, eliminating the halogen bulb and creating a totally maintenancefree system.

SC-1700 LCD Acuity Chart System Marco

The SC-1700 LCD 17" Acuity Chart System combines all of the key elements of advanced refractions and automated LCD technology with the important clinical benefit of Polarization for stereo and binocular vision testing. Other advanced features include 36 individual chart selections and automated functions that are instantly controlled by a user-friendly infrared remote control that also includes an acuity display window for opera-tor reference. Sophisticated masking features let the user isolate and maneuver individual horizontal and vertical lines as well as individual letters, numbers, and characters. To prevent letter memorization, the SC-1700 allows the operator to randomize letters and characters on any horizontally isolated acuity line. It offers a comprehensive selection of standardized Snellen, Pediatric, Tumbling E's, numbers, ETDRS (LogMar), binocular and other clinically validated tests. Contrast sensitivity testing is also a standard feature on the SC-1700, providing the ability to measure at three distinctive levels below the normal threshold. A customized slide show option allows the operator to download a selection of 18 personalized images to promote or enhance the commercial aspect of a practice. Two individual programming options allow the operator to pre-program any standard sequence of charts or refracting routines. Contact Marco for current pricing.

The LongLife P-O-C features a custom designed electro-optical system that provides the optimum brightness, bulb-life and color temperature necessary for accurate, repeatable test results. The unit's halogen bulb lasts over 10 times longer than incandescent bulbs. Thermal efficient composite cover and venti-

The LongLife P-O-C is self-contained so there is no need for an external transformer. A wide variety of acuity and vectographic slides are available. Table, wall, instrument stand mounts and floor stands are available. UL approved.

InSight Visual Acuity System

The InSight Visual Acuity System is an innovative solution to your acuity needs. It's the first LCD Acuity that does not require a PC! Not only do you get all your standard charts & tests, but the system includes animation.

The Charts are as follows: Illiterate E, Landolt Rings, Snellen, Numbers, and Allen Children

Tests: Ishihara, Cross Cylinder, Red Green Balance, Fixation, Astigmatism, Cross Grid, Coincidence, Schoeber, Worth 4 Dot, Red Green Panel, and Traffic Lights

Patient Education: Image Album (to be updated)

Media Package - including Video (Finding Nemo)

Calibration for 3'-22'

This affordable solution comes complete with:

InSight Acuity Program 19" HDTV Wall Mount SD Card Finding Nemo DVD. \$1,295.00

PLC-7000 Visual Acuity System

Veatch

The PLC-7000 LCD Acuity Chart is a dedicated refracting device which provides accurate and precise visual acuities...PLUS:

Slim & Sleek Modern Design - The slim design makes wall mount installation easy and the modern 19-inch LCD monitor upgrades the look of the exam room.

Chart Clarity / Chart Type - With a wide range of popular charts including Vision, Astigmatic angle, Binocular vision, Heterophoria, Stereopsis, etc., and mask (vertical, horizontal, single), the high resolution of the PLC-7000 allows for clearer, high performance acuity presentations as compared to a traditional chart projector.

Slide Show Functionality - Share information about eye health, your practice, new product offerings, etc. with the available 38 image slide show functionality via USB

Adjustable Testing Distance - Use your space more efficiently with the easily adjustable test distance. Depending on room size, simply use the included remote control to adjust the test distance anywhere from 8ft. - 20ft.

Simple, User-Friendly Remote & Functions · Easily adjust between functions such as Black & White reversion, contrast control, mirror function, mask function, red-green filter, program function, plus easily change the location of the visual acuity chart. Contact Veatch for current pricing

PROJECTORS, SCREENS & MIRRORS 73

Projectors

Sirius Computerized Projector

Veatch

A complete set of visual acuity tests in one easy-to-use product. Choose from a wide range of acuity tests that can be randomized to prevent memorization. Select single or multi line letters. Special optotypes for children, non English speaking, and mentally challenged patients to improve acuity testing accuracy. *Contact Veatch for current pricina.*

PreView LCD Acuity Device Marco

As technology continues to influence your practice, it should equally influence your patients. The NEW PreView LCD Acuity System from Marco streamlines your refract ing process while also impressing your patients. Equipped with all the computerized tests needed for a comprehensive eye exam the new PreView delivers controlled results while embracing the most important feature simplicity. The PreView is an extraordinary simple device to use, while its presentation is aesthetically attractive and modern. With a comfortable, user-friendly remote control, the PreView offer programmability for three separate refracting routines, multiple levels of contrast sensitivity testing, animation video for pediatric fixation, patient education images, ETDRS/speciality charts, and a randomization function which helps prevent letter/char acter memorization.

Contact Marco for current pricing. SC-1600 LCD Acuity Chart System Marco

The SC-1600 LCD Acuity Chart System is an aesthetically clean, dedicated refracting device that puts an extreme emphasis on precise, high-quality visual acuities. The high resolution LCD screen provides a wide range of popular Snellen, ETDRS, and stereo testing options for binocular vision examinations. The SC-1600 incorporates all of the advanced features found on the first-generation SC-2000 system, and the popular series of Marco automated chart projectors. The contrast sensitivity testing option measures contrast at three distinctive levels below the normal threshold. Character/letter randomization helps to pre vent patient memorization, and the user friendly remote control includes an LCD chart display window for convenient operator refer ence. The SC-1600 also has the ability to add up to 18 personalized images on a removable SD card.

Auto Refractor/Keratometer CRK-

Coburn Technologies

(NEW!)

The OZMA CRK-9000 Auto Refractor / Keratometer offers high precision measurements using Wavefront Technology and 3D Auto Tracking. Take advantage of this high quality product at an affordable price.

Features:

- Wavefront Technology
- 3D Auto Tracking

 The cutting edge auto sensor and 3D movement mechanism enables you to track down a measuring focus of an eye automatically and complete the measurement perfectly even with an inexperienced user

High Order Aberration Map

• Other than the conventional data, such as Spherical, Cylinder and Axis, the high order aberration data is displayed in a graphical Zernike refraction map for better understanding of patient's eyes & superior clinical decision making.

Color View Mode

 The Full Color CCD camera and white LED light source in the auto Refractor/keratometer enable you to see eyes and contact lens fitting status which was only possible with slit lamps.

Motorized chin rest & Auto-cutting printer

 Motorized chin rest allows to set the height of the measuring point comfortably & quickly. Automatic paper cutting and one touch paper change functions are new advantages of CRK-9000. 20362 7350

HRK 9000A Auto Ref/Keratometer

Increase total practice efficiency and enhance the total experience with Huvitz Auto Ref/ Keratometer HRK-9000, offering the world's first Contact Lens Fitting Guide with color camera. One of a kind, the HRK-9000 offers a Meibomian Gland Analysis function and Tear Film Break Up Time (TFBUT) measurement. Other features include Wireless Communication, full compatibility with all EMR Systems and Full Three Year Warranty.

- Auto Ref/Keratometer Features
- TFBUT Measurement & Meibiography
- Contrast Sensitivity & Glare Test
- Wavefront Technology
- Touch & Tilting 7_ Color Display
- Wireless Communication
- Peripheral Keratometry Measurement
- IOL Mode
- Iris & Pupil Diameter Measurement
- Contact Lens Fitting Assistance Guide
- Efficient Contact Lens Prescription
- Micro Lens Array creates separated focal spots to provide valuable information about the patients' ocular systems

More Accurate Data including KER and REF data

 Color View Mode: Full color CCD camera & white LED source in ref/keratometer enables you to see eyes & contact lens fitting status which was previously only possible with slit lamps

- Subjective VA Test
 Auto Tracking
- · Auto fracking
- Adjustable TFT LCD w/ LED backlight display
- Network connectivity

CV-5000S Automated Vision Tester Topcon

The new CV-5000S Automated Vision Tester from Topcon features a 50% reduction in size as well as a high speed lens chamber, making refractions fast, easy and comfortable. The redesigned KB-50S controller allows you to control the refraction process, demonstrate the benefit of a variety of lenses to your patients and educate them on their vision using a high resolution touch screen color LCD. The CV-5000S can be connected to Topcon's EXAM-5000, a complete state-ofthe-art ergonomic refraction system. It is also compatible with today's electronic medical record systems (EMR's) for a true paperless solution. Now available with button M&S Charts. 12.9" (W) x 10.3" (H) x 4.5" (D). 8.8 lbs. Contact Topcon for current pricing.

This space-efficient lane allows for computer integrated exams in a 6 x 7 footprint. Its customized refraction programs and onscreen technician scripts ensure fast, accurate refractions every time. The EXAM-5000 includes everything needed to conduct a comprehensive exam: Computerized Vision Tester (CV-5000S), Auto Lensmeter, Auto Chart Projector and your choice of Auto Refractor. Control of all such equipment is from one seated position via the KB-505 One-Dial Controller. The small optical head of the CV-5000S enhances patient comfort and communication. Computer-integration transfers Auto Refractor and Auto Lensmeter values directly into the CV (refractionist then finetunes the results). The system is wheelchair accessible and EMR ready. Never before has a refraction system offered so much in so little space

TT-01 Table Top Portable Phoroptor Stand

USAscopes

The Morrell TT-01 Table Top Phoroptor Stand weighs 12 pounds complete with its spring arm. This sturdy stand will support a phoroptor or another instrument, weighing 20 lbs. or less, on its counterbalanced spring arm without additional counter weight. Assembles in less than 5 minutes, the spring arm has a vertical travel range of 17", so you can easily place your phoroptor at any height needed for children or adults. This stand can be placed on any flat, level surfaces such as desks, tables, counters, etc. If traveling by air, you can pack your Table Top Stand and phoroptor in one of our cases with foam cutouts. If you are very limited in the number of luggage pieces, this stand is ideal as it breaks down so compactly that you can include it in your suitcase between your clothes.

RC-800 Auto Refractor/Keratometer

Tomey

TOMEY RC-800 AutoRefractor/ Keratometer was developed to satisfy all expectations. Features like color touch screen with auto shot function and a high speed printer make this device easy in handling as well as efficient and fast in operation. The RC-800 provides ease of operation with the incorporation of intuitive touch-screen operation which not only measures refraction and keratometry but also diameter measurement of the cornea and pupil. For refraction, fogging is applied automatically for each measurement for more accurate results. And keratometry measurements give you enough information for contact lens fitting. Contact Tomey for current pricing at 888-449-4045.

VT-10 Vision Tester Topcon

precision crafted refracting instrument designed to provide years of reliable service. In addition to its many standard features, it incorporates superior optical coatings on all lens surfaces to reduce glare and obtain unmatched brightness, built-in Red and Green lenses for duo-chrome testing and rear cover glasses to reduce dirt on the internal components. In addition, it is available in both Light Grey and Black finishes and in both (-) and (+) cylinder formats. 335mm (at 64mm PD setting) x 97mm x 294mm. 4.5kg.

ColorDx Expanded Color Vision **Diagnostics** (Software) Konan Medical USA, Inc.

The ColorDx app has been validated by, and is routinely used at the Naval Aerospace Medical Institute in Pensacola, FL (NAMI) to evaluate Navy, Air Force, Coast Guard, Marine, and Army applicants and aviators.

ColorDx is self-administering, self-scoring and uses an adaptive test strategy in which the screening portion is truncated once a number of mis-identified plates are scored. The test immediately moves to score the type and severity of the deficiency.

At the conclusion of the test, a comprehensive report is generated for to be either send to the EMR/HER system or to the printer for the patient / patient chart. A QR code is included for the patient to get additional information on color vision deficiencies.

ColorDx is available for Android, iPAD Windows and Mac.

ColorDx Pediatric 15 | CVTME PIP Konan Medical USA. Inc.

Pseudo Isochromatic Plates, or "PIP" tests have been the backbone of color vision testing since Dr. Ishihara's breakthrough products in the early 20th century. More than a decade ago, Dr. Terrace Waggoner developed his enhanced PIP strategy using six confusion colors

The first application for the Waggoner strategy was a pediatric test "Color Vision Testing Made Easy" or "CVTME". Considered the gold standard for pediatric assessment of colorblindness, CVTME is used in over 40 countries. and has validated also for illiterates at the US Special Olympics.

This test is used in a broad range of settings: pediatrics, eve physicians, school nurses, and many other disciplines of health care, in any language, world-wide. This easy to administer test features both hidden and non-hidden shapes that allow for successful answers while carefully discovering un-visualized targets. Brilliantly simple to take, easy to score and just plain fun for children. CVTME is now available as the Pediatric 15 of the ColorDx family of color vision testing products and includes on-line forms, scoring and training materials.

See what you've been missing [™]\$110.00

ColorDx Standard 24 + Blind Spot Amsler

Konan Medical USA, Inc.

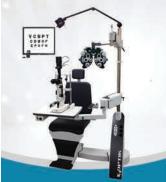

Following the successful CVTME, Dr. Waggoner expanded the testing strategy for adults with the PIP-24 booklet. This Standard Level Test is one of only two tests validated and required for Naval Aviators for color vision deficiency screening and is used globally in medicine.

The FAA has accepted this test to be used by aviation medical examiners for pilots' annual physicals, which require color vision testing. Utilizing the Waggoner six-confusion color strategy, the Standard Level has been independently validated by academic institutions and military services for their demanding needs.

Anomaloscope

The Heidelberg Multi-Color(HMC) Anomaloscope is a microprocessor controlled device for precision diagnosis of color vision in the red/green (Rayleigh equation) spectrum and in the blue/green(Moreland equation) spectrum with integrated automatic neutral adaptation. The unit is normally controlled using the Windows[™] based software and cable from a PC. Cable is included. The program supports incorporation of patient data and results comparison. As an alternative, you can control the unit using the optional keypad (P/N 4667) with LCD display and then no computer is required. Meets requirements of DIN-Norm 6160, Uses Nagel formula calculation, Supports driver testing, Adjustable automatic neutral adaptation, Standard test field of 2° Based on additive mixing of colors, Good ergonomic design and +/- 6 D diopter compensation.

City University, London Color Test

Richmond

Includes 10 plates. Similar to the Farnsworth D15 test. Presents the sample and four additional figures, which provide normal, deutan, protan, and tritan choices. Useful for determination of inherited defects for protan and deutan errors as well as acquired color vision defects

Laminated US \$322.00 Farnsworth 100 Hue Color Test

Richmond

The Farnsworth-Munsell 100 Hue Test examines hue discrimination ability often used in vocational and diagnostic applications. The test has proven to provide reliable results which can be applied to many occupational and psychological situations. The Farnsworth

color vision test. The Richmond Products ver sion of the Farnsworth 100 Hue Test comes boxed in clear acrylic containers which make scoring easy and reduces the potential for test disruption by holding the patient's disc sequence intact. Farnsworth F100 Hue Test was developed in the 1940's. Errors are scored and graphed by the Richmond Products CD with Farnsworth 100 Hue MS-Excel Template for Scoring. Other scoring methods and programs are also available. The 100 Hue Test has been the subject of extensive research papers. In addition to congenital color deficiency screening, there is growing evidence that adult acquired color deficiency, especially in yellow and blue perception, can indicate medicinal toxicity and other problems. Increasingly complex security and medical systems also require verification of normal color perception in the three types of color receptors. Hue discrimination ability is estimated from the total error score and the type of color deficiency is determined from a graphical representation of the results. Characteristic 100 Hue plots for congenital protan, deutan and tritan defects show concentrations of errors in well defined positions nearly opposite in the polar diagram representing the circle of hues. Farnsworth 100 Hue Test including MS-Excel Scoring Template on CD. (8lbs.)

4541R Magnetic Farnsworth 100 Hue \$810.00 F100R.....\$680.00

Farnsworth D15 Dichotomous Color Test Richmond

The Farnsworth D-15 test contains a reference disc holding Munsell notation 10 B 5 4 and fifteen numbered discs which make up an inccomplete color circle. The patient arranges the discs and then evaluation of the patient's arrangement separates "normal" color perception from moderate and strong defects in deutan, protan or tritan axis color discrimination. The Richmond Products version of the Farnsworth D-15 is boxed in a Plexiglas container. This makes scoring easy and reduces the potential for test disruption by holding the patient's disc sequence intact. Richmond D-15 also, a durable laminated score template for copying, a supply of finger tip covers for the test subject's fingers (to maintain cleanliness and accuracy of the color discs), and comprehensive instructions. We also offer the Lanthony desaturated 15 disc color test which separates patients into mildly color deficient from those with normal color perception. We also offer a choice of illumination sources including a Tru-daylight illuminator table light, floor lamp or a C-Daylight glasses to permit the use of incandescent illumination. Also available in a Magnetic version that keeps disks clean.

Flat Tray Illuminator for Farnsworth Testing

Richmond

Our new Flat Trav illuminator is specifically designed to be used with Color Arrangements tests such as the Farnsworth 100, Farnsworth D15 and Lanthony Desaturated D15 tests. Provide the recommended illumination for all color vision testing including Farnsworth D15, 100 Hue, SPP, HRR and Ishihara. The True Daylight bulb gives off 6280 degree K light which closely matches the standards set by the International Commission of Illumination. The Tru-Daylight bulb has been the subject of numerous color vision testing studies (list available) and has been the recommended light source since the MacBeth Lamp became unavailable. Illuminators have been approved by the U.S. Food and Drug Administration and the U.S. Defense Personnel Support Center for the armed forces and provide a Color Rendering Index (CRI) of 94 as recommended in various clinical studies and the National Research Monograph. The flat tray permits the color disks to be spread out for the patient to arrange the color disks under the prescribed illumination. The fixture and tray are made of non-glare ABS plastic for long term durability. The tray is removable. Easel Adapter for the flat tray illuminator supports testing at 45 degree angle with Pseudoisochromatic Test Books. Include light switch and 4 ft cord. 5139R True Daylight Illuminator with flat tray for 115

French Farnsworth D15 and Lanthony Color Test

Richmond

The Farnsworth D-15 test is a subset of the well-known Farnsworth 100 Hue Test. The Farnsworth D15 is packaged with both French and English instructions. It is intended for occupational evaluation and classification. The Farnsworth D-15 and 100 Hue tests are correlated. The D-15 test contains a reference disc and fifteen numbered discs which make up an incomplete color circle. Patient arranges the discs and then evaluation of the patient's arrangement separates 'normal' color perception from moderate and strong defects in deutan, protan or tritan axis color discrimination. The Lanthony Desaturated test is the same test as the Farnsworth D-15 except colors are desaturated. Desaturation changes the outcome of the test such that this test separates normal color vision from even a mild level of defect. It also makes the test much more difficult. The recommended application is for disease detection. Both tests include French and English instructions, laminated score sheet, non-latex gloves to protect the colors, and a clear plastic case which protects the patient's result during scoring. FD15C

Color Tests

H.R.R. Color Blindness Test Book

Richmond

The new 4th edition of the HRR test is based on the latest printing technology and technical assistance from Drs Jay Neitz and James Bailey of the Wisconsin School of Medicine and Southern California College of Optometry, respectively. In clinical testing, the new version has shown itself to be an excellent test which fixes the historical criticisms of the HRR design. Key advantages are: Provides Acquired and Congenital Testing (Blue/Yellow and Red/Green); Diagnoses any defects as to type (Deutan, Protan, Tritan) and extent; Uses quick 6 plate screener to separate Normal from Defective; Figures work for English speakers, illiterate and non-English speakers. Standard versions include 6 demonstration plates, the six screener plates and the 14 diagnostic series for a total of 24 plates. Each of these plates has its own tab for easy AND clean page selection. All version include instructions in English and a laminated copy of the score sheet. Identical in structure to the original AO version. New laminated version helps avoid fingerprints and damage to the plates. Uses a special matte finish laminate which reduces glare. Combined version includes HRR 4th Edition and four Amsler charts (including the red on black chart) to make testing for Acquired color vision defects easier than ever. 13396R Standard Version \$219.00

HRR 4th Edition for Pediatric Color Testing

Pediatric color testing demands laminated pages to avoid damage from finger prints. The HRR is the ideal adult and Pediatric color test because of the simple shapes it uses. We verified the colors were not affected by lamination. Laminating protects the pages for years of use. Testing for red, green, blue and yellow insures you can test for congenital and acquired color defects. Plaquenil referrals should also include Amsler grids and so the 4th Edition is also available Laminated or Laminated with Amsler Grids, Packages also includes 4523C reversible occluding glasses to permit acquired color problems to be tested monocularly, as recommended. The HRR Matching kit is used to teach younger patients the 'matching' concept for color testing using the HRR 4th Edition. It also includes a laminated page for the parents helping them understand the occupational implications of color vision defects. 13396LMR HRR 4th Ed with all pages laminated \$279.00

HRR 4th Edition Pseudoisochromatic

Test

HRR (Hardy Rand and Rittler) 4th Edition Pseudoisochromatic test provides testing for both congenital and acquired color vision defects. Acquired defects growing in importance due to drug toxicity and occupational affects. HRR Product has been clinically veri fied and published in Visual Neuroscience published jointly by Cambridge University and University of Houston. Use of screener plates makes verification of normal color vision quick. Use of simple figures make memorization impossible and permit testing of both adults and children. The HRR test from Richmond Products includes the four demon stration plates, the six screener plates and the 14 diagnostic series for a total of 24 plates Each of these plates has its own tab for easy selection and to keep the pages clean. Test also includes instructions in English for the test administrator and a laminated copy of the score sheet. Pages are numbered on the reverse side to avoid easy detection by the patient. The score sheet can then be duplicated on a copier or copied onto the patient's record. Also available with Chinese, French, Dutch, German, Greek, Italian, Polish, Potugese, Turkis, Spanish, Japanese and Korean directions- Call.

HRR Color Test with Spanish

Instructions

Richmond

This version of the HRR book provides instruc tions for the administration of the HRR test in both English and Spanish languages. The test objects used by the HRR book are universal (O, r, t) and can be used with any language group. Here is a sample of the opening paragraphs: Mantenimiento: Mantenga el libra de exámen cerrado cuando no esté en uso. No toque los platos con los dedos. Voltee la hoja por el borde. Asegúrese que el paciente esté sentado con los oios más o menos a treinta pulgadas de distancia del libro cuando el libro esté en el estante del caballete de lámpara. Encienda la lámpara y excluya del cuarto cualquier luz superflúa que pudieracaer direc tatmente a la prueba. Coordinación: Los platos suministrados con los productos Rojo/ Verde (Red/Green) y Azul/Amarillo (Blue/ Yellow) HRR subset incluyen números para las páginas que, si se quiere, podrían ser añadi dos. El sistema numérico usado para cada uno de estos libros subset está basado en la numeración de las páginas mostrado en los cuadernos de punctuación (score pads) y en los platos HRR originales. Esto permitirá la coordinación si después se deseara usar el examen entero de rojo.verde/azul/amarillo del libro HRR completo. 5861R HRR Color Test with Spanish Instructions

The first innovation in Ishihara Color testing in 100 years! We've taken a genuine Kanakara-Japan manufactured Ishihara test and laminated the pages to provide protection from fingerprints and other damage. Photospectrometry tests were then run to insure that the laminating process did not affect the color. In some jurisdictions, Ishihara remains the required test despite superior results achieved with HRR testing. Occupational and Pediatric applications can jeopardize the cleanliness and longevity of any color tests as fingerprints are very damaging to the color inks. Richmond's Laminated Ishihara is intended to address these issues with a protective non-glare coating proven to leave the original ink colors unchanged. This protects the Ishihara color test for many years of use. Further, we've used the same spiral binding used on our HRR book to permit presentation of 'one plate at a time'.

Large Stimulus Color Farnsworth

Richmond

This Pediatric Large Stimulus Color Farnsworth test provides two sets of test caps which are 1.3" (3.3cm) in diameter. The basic test is similar to the standard Farnsworth color deficiency tests. These larger stimulus caps are more suitable for pediatric use. Two sets of discs are provided to permit a 'matching' exercise to provide the examiner additional insight. To provide correlation of results with standard Farnsworth tests, a set of reduction rings (to .47" or 1.2cm) is also provided. The color surface has a protective coating to reduce the risk or smudge damage. 260100 Pediatric D-15 Double Set (32 Discs) Boxed

Color Tests

Magnetic Farnsworth D15

For many years, anyone using the Farnsworth D15, L'Anthony desaturated test or Farnsworth 100 Hue has complained about how patients cannot avoid touching the color disks with the result that the test kits become unusable. Further, the disks are very easy to lose. We have developed a new packaging for these products in order to solve these problems. We have magnetized the disks and encapsulated them in a sealed clear plastic box. The patient selects the disks using a magnetic pen and moves them through the gate into a scoring rail area. When complete, scoring is easily accomplished by reading the scores through the bottom of the box. Tip the box around and the disks return to the corral for the next patient! Color testing becomes a game so that adults and children as young as 3 years old are much more engaged!

4528C Magnetic Farnsworth D15 Kit...... \$200.00 4540C Magnetic L'Anthony 15 desaturated Kit \$210.00 Pediatric Color Test

Richmond

The Color Vision Test for Pediatric use provides 10 plates recognizable by children. Each figure is embedded in Ishihara type dot patterns. They can be used for simple voice recognition or as tracings. The book tests for Red/Green deficiency. Written by Drs. Kojima and Matsubara.

1770 Pediatric Color Test Plates \$85.00

Roth 28 Disc Arrangement Test

Richmond

Roth 28 Disc Test. Studies the characteristic axies of dyschromatopsia similar to the D15, however, provides a greater degree of sensitivity. Comes with a transparent base to make scoring readable. Includes laminated scoring template and instructions. Specs: 8-1/2" by 11" (24cm x 31 cm).

SPP Color Vision Tests

The Standard Pseudoisochromatic Plates developed by Drs. Hiroshi Ichikawa, Kaitiro Hukami and Shoko Tanabe. There are two versions available, the SPP-1 for congenital color vision defects and SPP-2 for acquired color vision defects. Both books include instructions for test administration and a sample score sheet. The SPP-1 includes 19 plates and tests for Duetan and Protan (Red/Green) only. The SPP-2 test includes 12 plates. 8" x 8" x 1" book. 2lbs.

Includes 180° axis compass printed directly along the top of each paddle. Lenses are 16 mm diameter, recessed to help prevent scratching. Lenses are glass for greater accuracy and durability. Includes protective case. 6701 Retinoscopy Rack with Compass \$120

For testing and training of visual functions and testing for diplopia, fusions, and suppres-sions. Heavy-duty flashlight with Red and Green reversible spectacles. Instructions included. Batteries not included. \$39.95

Bagolini Lenses in Frames

Bagolini Striated Lenses in Goggles with the lenses securely mounted in a comfortable frame for use in evaluating retinal correspondence in patients with suspected eye deviations. Bagolini lenses are used in the analysis of anomalous correspondence, suppression. amblyopia, cyclo tropia and cyclo fusion. To support testing for these conditions, the Bagolini Goggles have the lenses secured at 135° and 45° so that the patient responses can be used to diagnose each condition. The Bagolini Goggles are used with a spotlight stimulus, such as a penlight or transilluminator at near or far distance. A patient with no suppression will see two diagonal lines crossing above, below or at the light source. If suppression is present, all or part of one line will not be seen. Illustrated potential patient responses are included in the instructions to allow the patient to simply indicate by matchina.

These new Bagolini Striated Lenses in Goggles are an improved version with substantially more visible striations. This improvement is the result of close cooperation with Dr Bagolini in the production of the lenses. As a result, the goggles are more accurate and easier to use with younger children suspected of binocular vision defects

6570R Bagolini secured in white Frame with Temple . . \$155

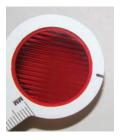

The Distance Phoria Test provides a very quick measurement of Heterophoria at 1,2 or 4 meters. A push-button central fixation LED light that turns on with a simple touch is also available as an option. Scoring reveals if the patient has normal alignment when fusion is broken or if the patient has abnormal alignment. The card helps diagnose Uncrossed or Crossed Diplopia and RhypoP. LhyperP. RhyperP and LhypoP. The Distance Phoria Chart can be used with patients complaining of Double Vision when driving or other distance viewing. The range of Phoria measured varies with the testing distance. The Distance \$189.00

chart includes a push-button central fixation LED light that turns on with a simple touch and a Maddox Rod. This chart is available framed to hang on the wall and is 24.5 x 25.5 (62 x 65 cm) in size. As an alternative, the Chart is also available to insert in a standard ETDRS cabinet.

and nature. Includes 32 pages of 3D wonder with images for a tarantula, contentment, sea shells, fly, tortoise, and myrtlewood bowl. The text is geared for ages 10and up, describing the basic nuts & bolts of how 3D imagery works, however the reaction of children as young as 2 _ yields excellent understanding of their basic binocular vision capability. Images are not calibrated for stereopsis. The images are viewed with red-cyan 3D glasses (2 pairs are provided with the book). The book begins with a wonderful two-page spread of drawn phantograms by Steve Hughes, and includes some amazing photographic phantograms by Steve Boddy. Photo shows the book's cover which is not a 3D image. It is however the right-eye half of a phantogram. It differs from a normal photograph in that the narrowing effects of perspective have been reversed out. Book Size: 8 1/2 x 11 inches (21.5 x 28 cm). 5587R Pop-Up 3D Book...... \$34.00

Random Dot E Test

The Random Dot E Test is designed for early non-readers and non-verbal children. This new Random Dot test has been developed and tested by the same team that has long published the various insect polarized tests. The new version has some very important new features.  Random Dot Test with LEA Symbols

The new Random Dot Test is designed for early non-readers and non-verbal children. This new Random Dot test has been developed and tested by the same team that has long published the various insect polarized tests. The new version has some very important new features. They include a high quality pair of stereo glasses. They test down to 12.5 seconds of arc and use LEA Symbols for basic 500,250, 125 and 63 levels. Answer key is printed on back to eliminate losing scorecard. The test still includes no monocular clues.

Slant Thorington Card with Transilluminator Adapter Bichmond

The purpose of this instrument is to determine natural resting position of the eyes. It is used with a transilluminator and a Maddox Rod. Scoring reveals if the patient has normal alignment or if the patient has other than normal alignment. The card helps diagnose uncrossed or crossed diplopia and RhypoP, LhyperP, RhyperP and LhypoP. Each optotype represents one prism diopter. Slant orientation of optotypes supports both horizontal and vertical measurements depending upon orienta-tion of the Maddox rod. The one sided card does not force the patient to understand different responses for horizontal vs vertical measures. The advantage of the Slant Thorington Card with Transilluminator Adapter is that it provides automatic alignment (and temporary attachment) to the transilluminator. This frees examiner's hands to deal with the Maddox rod and the patient response. Works with any brand of transilluminator including Welch Allyn, Keeler and Heine. 4893R Slant Thorington Card with Transilluminato

Choice of Stereo Fly or Butterfly Polarized tests with instructions in both Spanish and English. Tests are designed to rapidly access Amblyopia and Strabismus using gross through fine stereopsis. Tests down to 20 seconds of arc. Employs familiar LEA Symbols™ for 400, 200 and 100 levels. Answer key printed on the back cover. Includes both Adult and Pediatric Polarized glasses. 6042xx

The Adventures of Patch Cat and Strabismouse encourages children needing patching to be successful. The booklet introduces four characters all wearing patches of various types: Patch Cat, Strabismouase, Mr Frog, Miss Amblyo thepia. They go to the Eye Doctor and even meet Wise OI Owl. See 'Additional Images' tab to see pictures of each of these characters.

This beautifully illustrated book is intended to be read by parents to their children who have been diagnosed with Amblyopia or Strabismus. Follow Patch Cat and Strabismouse as they explain difficult terminology and treatment. In a very fun manner, it provides an accurate but understandable explanation of these conditions as well as providing encouragement for acceptance of the patching routine.

These Thorington Cards and Charts provide a very quick measurement of heterophoria. The Near Cards are used with a Transilluminator and a Maddox Rod and they are self-aligning to the light for easy set-up. Scoring reveals if the patient has normal alignment when fusion is broken or if the patient has abnormal alignment. The card helps diagnose uncrossed or crossed diplopia and RhypoP, LhyperP, RhyperP and LhypoP. Using the Adult Near Card, each optotype represents one prism diopter, and measures +/- 12 diopters. The Pediatric Near Card measures +/- 20 diopters of Phoria. The Distance Thorington Chart can be used with patients complaining of double vision when driving or other distance viewing. It can be used at 1,2, or 4 meters. The range of phoria measured varies with the testing distance. The chart is 24.5 x 25 and fits in a standard ETDRS cabinet.

Richmond

New Adult Temple Fun Frames permit you to 'ioin in the fun' with your pediatric patients. This is an easy way to get your pediatric patients to wear their Fun Frames with occluder, frosted, polarized, red/green or Retinoscopy lens. Choice of 4 styles -Butterfly, Horse, Parrot or Tiger. Frames have no lens but your Rx can be added.

Bangerter Occlusion Foils and Bar Richmond

Foils provide a system of graded foils to equalize the spatial contrast of the dominant eye to that of the amblyoptic eye. They can be used for both Prophylactic and Therapeutic applications. In Prophylactic use, the occluder can help prevent Amblyopia, Suppression, and Abnormal Retinal Correspondence. In Therapeutic use, they can be used for Amblyopia treatment, Orthoptic Treatment, Diplopia, and Diplopia in monocular aphakia (with 0.1). Designed for easy adhesion to the patient's glasses plus they are disposable for cleanliness. The occlusion bar can be used to determine the level of occlusion desired. It provides the same 10 levels of occlusion as the foils. Note: Higher the number (0.3 to 0.6) yields greater visual clarity. Bangerter occlusion bar is used to determine the level of occlusion desired. It provides the same 10 levels of occlusion as the foils.

Cardiff Pediatric Acuity Test

The Cardiff Acuity Test[™] is designed specifically for acuity measurement in children aged 6 months to 3 years. Employs the principle of vanishing optotype, in other words the figure (fish, car etc.) blends with the gray background shades at the acuity threshold. Thus resolution, detection and recognition acuity thresholds are all brought together. Target figures are pictures, all of the same overall size, drawn in decreasing widths of white and black lines. The acuity is determined by the narrowest white band for which the target is visible to the child. The vanishing optotypes are combined with the principle of 'Preferential Looking' to provide a pediatric test method that provides excellent accuracy of diagnosis. When a card is presented the child will choose to look towards the top or bottom of the card if they have sufficient acuity to recognize the target figure. This works because the child naturally prefers to look at a target figure rather than the blank end of the stimulus. Further, 'Preferential Looking' works when the examiner does not know whether the top or the bottom of the cards contains the target figure. If the child does not show a preference for either the top or bottom of the card, the acuity threshold has been exceeded. The Cardiff Acuity Test includes three cards at each acuity level. The Richmond P/N 4740R Standard card set includes 12 levels (36 cards) and covers acuity levels from 20/160 to 20/12.5 (6/48 to 6/3.75). The Cardiff Test employs an up-down positioning of the target figures rather than the right-left separation (as is used in the Teller Acuity Cards™ II) so that the eye movements are easier to discriminate in cases of congenital nystagmus. Further, the Cardiff Test can be used in cases of suspected malingering as the patient's eye movements are involuntary. Administration with the Cardiff Acuity Test is relatively quick and easy to learn. On average, an experienced examiner can conduct a complete test in 3-5 minutes. 4740R Cardiff Acuity Test Standard Set with 36 cards

and occluding glasses\$1800 4741R Low Vision Cardiff Acuity Test Low Vision set with 45 cards and occluding glasses. \$2300 Reduced Price!

One sided crowded numbers, the other side standard spacing. Optotypes in LogMAR increments from 6.3M (6/95 or 20/320 equiv) to .20M (6/3 or 20/0 equiv.). Also includes metric and inch ruler. Card measures 3.75 by 6.25 in (9.5 x 16 cm). 271000 Lea Numbers Near Pocket Card (1/2 lb) \$13.00

Lea Playing Cards Richmond

Playing cards are one of the easiest ways to measure visual acuity of very young children. Visual acuity is determined by measuring distance at which the smallest symbol is seen. This set can also be used to train an amblyopic eye. The cards also teach concepts of similar, different, big and small and bigger and smaller

Lea Symbol Books Richmond

Both books use Lea Symbols and are spiral bound, Pages measure 13cm x 13cm (.5"x.5"). The single symbol book is used with children who cannot perform in standard line tests or with the Crowded Symbol Test. There are 13 pages with sizes ranging from 3/30 (10/100) to 3/1.5 (10/5). Each page has 1 to 4 symbols of the same size. Cover piece included. Each page of the crowded book has one optotype surrounded by symbols of the same size on all 4 sides. Optotypes range from 3/9.5 (10/32) to 3/2.4 (10/8). There are four pages for each size. Correct identification of the middle symbol is necessary. 19-36 months. 250600 Single Symbol Book.....\$55

250700 Crowded Symbol Book\$55

Mars Contrast Test is a true contrast sensitivity measure that indicates the lowest contrasts your patients can perceive, rather than the smallest optoypes they can identify at some low, arbitrarily chosen contrast. With the Mars test, it is the contrast, and not the letter size, which diminishes from the beginning to the end of the chart. The Mars test uses the same contrast definition as the now discontinued Pelli-Robson chart, and values obtained on the Mars are virtually interchangeable with

those previously using the Pelli-Robson. The Mars Contrast Sensitivity Test has Sloan Letter and Number versions

Mars uses log contrast sensitivity which is the logarithm (base 10) of the reciprocal of the minimum contrast to correctly identify a letter. Mars is more convenient to use clinically though, since it is smaller, viewed closer, easier to protect, and doesn't require the nonstandard viewing distance of 1 meter. The viewing distance can be varied according to circumstances but is accounted for in the scoring calculation formula.

MARS has been clinical verified as an acceptable substitute for the discontinued Pelli Robson Contrast Test.

Wormington Near Point Card

Specially designed to be a corrected Rosenbaum Card (as noted by Horton and jones in 1997 and others). The "J" notations are not used because of the lack of standards associated with this notation. Measures a patient's single letter near acuity and reading acuity. The font used is "New Roman Times". a popular font used by newspapers and books. A series of tumbling E's, a metric scale, and pupil size array have been added to the original Rosenbaum design to increase usefulness. Printed on white styrene plastic. Card size is 3 1/2" by 6 1/2" (90mmx165mm). 4537

Wormington Near Card \$12.00 **Vectographic Projector Slides**

Testing slides for Binocular Refraction Standard acuity and vectographic testing on one slide. No need to change slides to change tests. Belrose Exophthalmometer Belrose

This prism type exophthalmometer is engineered for accuracy and simplicity for the measurement of the exopthalmos. Prisms are made of clear plastic with easy to read millimeter lines on both sides. The eye is seen through the lower half and the scale through the upper half, eliminating the difficulty of parallax and facilitating a rapid determination of protrusion. Color grey with storage case. Introductory Price!..... \$249.00

Intra Ocular Lens Model

The IOL Eye Model dramatically demonstrates how vision is restored after cataract removal The six inter-changeable lenses simulate IOL and Toric implants of clear posterior capsule and post YAG posterior capsulotomy. The model shows a cross section of the eye in three layers; the retina, choriod, and sclera with veins and arteries. Made of plastic, the model measures 3 3/4" (9 cm) diameter Mounted on a white opaque plastic base. Realistically colored and textured with the cornea, optic nerve and insertion of muscle are showing. 5970 Intra Ocular Lens Model \$129.00

Alternating Flippers are used to increase the speed and reduce the latency of the speed of response for those with difficulty shifting focus. Alternating Accommodative Flipper (aka Rock Flipper) vision therapy can be conducted in and out or at home for focusing disorders. The primary focusing dysfunction this procedure treats is accommodative infacility (a problem shifting focus from near to far and back again).

Our Alternating Flippers have a plus lens at the power specified on one side and occluding lens on the other side. Flip the instrument over and you get the same power but minus lens and occluding lens on the alternate side. Various Powers\$16 Contact Richmond for current pricing.

Astigmatism Demonstration Model Richmond

Explanations of Astigmatism, Myopia or Hyperopia will be more easily understood by your patients with this eve model. This 6 times enlarged model demonstrates how the focal length of the eye affects vision and how it can be changed through correction. Two cords and a bead can be used to realistically simulate either a myopic or a hyperopic focus. The model shows the eye in three layers: interior, exterior and central retina. It measures 5 1/4 in diameter. Made of durable plastic and shows the eve in full color. 5969 Astigmatism Demonstration Model. \$129..00

Bi-Nasal Occluder Kit

The Bi-Nasal Occluder, also called a Bi-Nasal Ruler, can be used to determine the degree of nasal occlusion needed to eliminate or reduce symptoms from the traumatic brain injury (TBI) and stroke, double vision, amblyopia, esotropia, convergence excess, divergence insufficiency, and visual over-stimulation/confusion. The Bi-Nasal Occluder also allows for repeated measurement and more precise placement of occlusion foils or tape on spectacle lenses. 6930R Kit with Binasal Occluder, two bangerter foils

Brock Strings Richmond

Brock Strings are used for treatment of convergence insufficiency and other anomalies of binocular vision as well as to disrupt suppression of one of the eyes. During therapy, the end with the stick is held near the tip of the nose while the other end with the loop is hung to a fixed point like a door knob.

Each Brock String consists of a white nylon string 10 or 12 feet in length with three (3) small wooden beads of different colors. Alternate models are 6 or 12 ft with 5 beads. Check www.RichmondProducts.com for more details

Accommodation Rule

Made of sturdy white plastic with 10 mm square black figures. 50 cm long. Engraved with cm and inch markings. Comes with 12 copies of the test card. As these wear, replacement cards (P/N 15201) may be needed.

ear Contras Richmond

Adult Near-Contrast Test Booklet provides contrast sensitivity levels of 100, 25, 10, 5 and 2.5 percent using Michelson measures. Printed on high-quality styrene for long term durability. Each contrast level has ETDRS style letters and Continuous Reading Examples. Test is comparable to the Holladay Functional Acuity Contrast Test (F.A.C.T.TM), which is currently unavailable.

The ETDRS style lettering provides excellent repeatability and is an objective measure useful for medical insurance submission. The continuous text at each contrast level provides a 'real world' example to help patients recognize any decline in low contrast acuity. Use of the test booklet near (at 16 inches or 40 cm) is much quicker than repositioning a patient to use a distance contrast test such as ETDRS or Pelli-Robson. Since both full contrast reduced contrast levels are presented under the same conditions, the illumination is identical. This permits accurate comparison of the results at the various contrast levels.

Score card, recording form and comprehensive instructions are also provided to support plotting a graph of the patient's results indicating the relationship of visual acuity and low contrast sensitivity. Normal ratios are also indicated to permit comparison.

> Allen Figure Pocket Box Stick Bichmond

Price: 6735R Adult Near Contrast Test US \$ 140.00

Allen Figure Pocket Box Stick fits in your pocket and provides a convenient way to present the popular Allen Figures to children. > Aniseikonia Screener Richmond

This book is used to screen for Aniseikonia (inequality of images sizes). It can be used as a pre- or post operative screener to diagnose LASIK surgical defects. It can also be used to diagnose congenital defects and post operative results for PRK and Cataract surgery. The test method is very reliable yielding consistent results for this very hard-to-diagnose condi-tion. Tilting of the head or glasses does not break separation. Designed by Dr. Awaya at Nagoya University. Measures deviations from 1% to 24% in 1% increments. A similar test for Cyclodeviation is also available. Includes 24 figures, 0 equal size figure, instructions and prescriptions quality Red/Green glasses. 7" x 7" x 1/2". 1-1/2lbs.

1378R..\$375.00 **City-Cardiff Infant Gratings**

Richmond

City-Cardiff Acuity Test was developed by a team of clinical vision scientists at City University-London and Cardiff University in Wales. The test provides a rapid means of assessing infant visual acuity from a few months to 3 years. The cards make use of the vastly improves the effectiveness of educa-

established assessment known as preferential looking whereby an infant's innate visual tendency is to fixate on a pattern. This tendency is then exploited to obtain a quantitative estimate of acuity. The use of 'round' gratings prevents 'clues' at the edges of traditional square grating patterns.

This simple to use test involves presenting an infant with a series of grating patterns which differ in spatial frequency (fine vs course, or narrow vs wide lines) and then observing the infant's eye preference or behavior. This can be accomplished at 1/5 meter through the "peep hole" provided, which avoids distraction of the administrator's face. As an alternative, experienced test administrators can view the child's eye preference from the side of the card if the administrator's face is not the attraction. The examiner then determines whether a looking preference exists for a given grating and if it does not, the infant can be presented with further gratings of increased spatial frequency until the infant's acuity limit is achieved. In other words, the infant no longer exhibits a preference for the grating at the top or bottom. 6806 City-Cardiff Preferential looking Acuity Test\$1500

DESD Dyslexia Decoding Encoding

Screener Richmond

The DESD Decoding and Encoding Screener for Dyslexia provides a measure of sight-word recognition skills for grades 1 through 8. The resultant Reading Raw Score correlates with prevalence of dyslexia. Consists of three sections: Decoding, Encoding and Letter Writing. Decoding is a norm-referenced measure of sight-word recognition (Reading Standard Score). Qualitative indicators in the Encoding section identify deficits in sight-word recognition from deficits in phonetic analysis. The test also identifies the specific skills that a child brings to bear on the task of reading words. This makes for easier detection and description of reading problems for appropriate referral for educational therapy. The DESD identifies children at risk for dyslexia so they can be referred without delay. Early screening and intervention made possible by the DESD

tional therapy and helps minimize the secondary emotional problems dyslexia can create. DESD has been standardized on a sample of 678 students, grades 1 through 8. Can be administered in 5 to 10 minutes. The test itself is a simple 11 pages with increasing difficulty plus a pad of spelling response forms for the answers. DESD scores are correlated with the NEAT Word Recognition score. 5027

Floppy Fixation Pens For Pediatrics Richmond

Pediatric practitioners can't resist these fixa tions. All figures are floppy foam. Many are attached using a spring which lets them wiggle until the cows come home. Most pens are 7 to 9 inches long and bendable. Unfortunately, the available figures keep changing so you'll have to trust us to select a batch for you. Two of the typical selections are shown. Sorry, no specific pen orders. Not for possession by children under 3 years old.

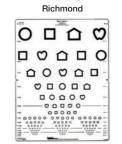

4603R Set of 5 Assorted Fixation Pens...... \$12.00 Kay Pix Fixation Sticks

Richmond

Double sided plastic fixation sticks will last a long time and prove to be excellent attention getters. Sticks are printed on styrene plastic and are 6" by 1 1/4". 18 months to 8 years. FS3 Kit includes three different sticks. Each stick has 3 or 4 pictures in color plus letters. FS1A1 has Winking Eye which moves when you wave the stick, plus small acuity chart with colorful animals on the reverse. This is our most popular fixation!

5947 Set of three Fixation Sticks \$32.00 Lea Distance Acuity Test Chart

Lebensohn Near Point Card Richmond

> kopunitionun kinonek kopun Proponisten kultion proponisten

This famous two sided contemporary Reading card was designed by James Lebensohn, MD and provides a full range of near point exercises including words, numbers and OX symbols. Optotypes include 20/80, 20/400, 20/260, 20/200, 20/100, 20/65, 20/50, 20/30, 20/25, and 20/20. Notation equivalents include Decimal reading in English and metric, Jaeger, point size and visual efficiency percentages. Card size is 5.5° x 8.5 (14 by 22 cm). Super thick and laminated on both sides. Designed for use at 14^{μ} (35 cm). Red/Green bars employed on 5 to 12 pt optotypes.

MARS Letter Contrast Sensitivity Test Bichmond

trasts your patients can perceive, rather than the smallest optoypes they can identify at some low, arbitrarily chosen contrast. With the Mars test, it is the contrast, and not the letter size, which diminishes from the beginning to the end of the chart. The Mars test uses the same contrast definition as the now discontinued Pelli-Robson chart, and values obtained on the Mars are virtually interchangeable with those previously using the Pelli-Robson. The Mars Contrast Sensitivity Test has Sloan Letter and Number versions.

Mars uses log contrast sensitivity which is the logarithm (base 10) of the reciprocal of the minimum contrast to correctly identify a letter. Mars is more convenient to use clinically though, since it is smaller, viewed closer, easier to protect, and doesn't require the nonstandard viewing distance of 1 meter. The viewing distance can be varied according to circumstances but is accounted for in the scoring calculation formula.

MARS has been clinical verified as an acceptable substitute for the discontinued Pelli Robson Contrast Test.

6752 MARS Perceptrix Letter Contrast Test\$395 Contact Richmond for current pricing.

Near Card with Full Black and 10% Contrast in English

Bichmond

Near Card with Full Black and 10% contrast in English provides high contrast on one side and 10% contrast on the other. Key Features include lines of ETDRS Letters and Continuous Reading Examples in Spanish. Lines cover 20/400 to 20/10 in 17 increments Letters and 20/100 to 20/20 for the Spanish Reading section. For ease of recording the best line read, this Mixed full and 10% Contrast Reading Card shows Snellen in Feet/ Meters, LogMAR, Decimal, Letter Size and Diopters of Add. Printed on very durable styrene. Use at 40 cm.

Note: Similar cards are available in Spanish, Dutch, Portuguese and French. Contact Richmond for current pricing.

> Opticokinetic Drums Richmond

Pediatric Acuity Test

This book combines the accuracy of a linear test and LogMAR sizing with the ease of naming pictures. Intended for pre-reader children. Uses eight pictures in groups of four. Each eye can be tested with a different arrangement of the same pictures for excellent comparison. The size index identifies the acuity size in LogMAR and Snellen. The range for LogMAR is 1.0 to -0.1 and Snellen 10/100 to 10/8 ft. (3/30 to 3/2.4 meters). Key card can be used to prompt shy or uncooperative children. Three Meter Kit (P/N KPTCRx) includes test book, near test card and key card. The two Key cards come together include the 22 figures and measure 8" by 10" (20cm by 26cm). They are laminated on both sides for washability. The Crowded Near Point card is also sold separately (P/N KPTN3x) and has reduced size pictures and cover LogMAR sizes 0.8 to 0.0 with Snellen equivalents. Double sided. 5522 Single Figure Book Set \$190.00

Richmond

This is a new Pediatric Near Contrast Test Booklet supports testing at full contrast (100%), 25, 10, 5, 2.5 and 1.25 percent using Michelson. One side of each page provides LEA Symbols for testing of 3 to 5 year olds. The other shows LEA Numbers™ for testing 5 to 8 year olds.

Near Contrast testing provides an efficient means to detect ocular pathologies, including glaucoma, ARMD, diabetic retinopathy, cataract, and keratoconus. Low contrast acuity measurement is used to demonstrate progress in disease treatment and helps parents understand.

Clinically tested LEA Symbols and Numbers insure a narrow acuity threshold for accuracy.

Pediatric testing at near (16 in or 40 cm) keeps the attention of young patients. 'Slip-over template' is used to block the acuity measures thus simplifying what the child sees. Administration is quicker than repositioning a patient to use a distance contrast. Since both full contrast and other contrast levels are presented under the same conditions, the illumination is identical and permits accurate comparison.

Score card, recording form, answer key and comprehensive instructions are also provided to support plotting of a graph indicating the relationship of visual acuity and contrast sensitivity. Normal ratios are indicated for comparison.

Runge Near Point Card Richmond

The Runge Pocket Vision era Point Card pro vides rapid assessment of near point vision with complete interpretation to the broadest range of acuity measures available. The test is designed for use at 16 inches (40 cm), patients screen on one side, acuity measure on the back. This Near Point card permits designation of the results in whatever nomenclature is preferred. The letters on each line are in increasing level of difficulty. From the back of the card, the practitioner can easily determine the acuity level and then specify the patient's results in any of seven different acuity measures: Snellen Distance Equivalent in Feet, Snellen Distance Equivalent in Meters, Decimal, Jaeger, Times Roman Printer's Points, LogMAR, Actual Letter Size in Meters. Optotype sizes range from 10M (6/150 or 20/500 equiv., 0.04) to .32M (6/4.8, 20/16 equiv., 1.25) at 40 cm. Card measures 9.5x16cm (3.75 x 6.25 in). Also includes a 14 cm ruler and pupil gauge 2 thru 9 mm. 756000 Runge Near Point Card\$13.00 766100 Lea Numbers Range Card\$13.00 756200 Lea Symbols Range Card \$13.00

NCI support and flash drive backup. The supplied software loaded on the flash drive serves as an instant backup in any Windows XP, VISTA, Windows 7, 8 or 8.1 computer so your exam lane will be up and running again in minutes. The software does not have to be installed on the computer

and may be run directly from the flash drive! What you won't get is a no-name computer or cheap OEM product or a Send It Back and Hope You Get Service and No Backup. NCI software has been sold since 2003 and have thousands of installations in clinics around the world. All standard tests are included. Inquire about current pricing at 714.777.7740 or email us

at sloptics@aol.com Borish Vectographic Nearpoint Card II

Stereo Optical

Designed by Irving Borish and licensed by the Ophthalmic Research Institute, the Borish Vectographic Nearpoint Card II was designed to meet all nearpoint testing needs for binocular and monocular testing. Features binocular refraction, binocular and monocular visual acuity, binocular and monocular visual acuity, binocular accommodative range, random dot Stereopsis, real contour Stereopsis, horizontal and vertical phoria, horizontal fixation disparity. Mounts to nearpoint rod of phoropter and uses polarized filter. 6-1/2" x 5-1/2". Less then 1 lb.

Distance Randot® Stereotest Stereo Optical

The Distance Randot® Stereotestis the ideal tool for the eyecare professional who deals with strabismus, amblyopia, and intermittent exotropia. This test helps detect abnormalities in distance stereopsis and thus can give an earlier indication of the need for surgery. This stereopsis test (10ft/3m) is for patients as young as 4 years of age.

The Distance Randot Stereoetst was developed in conjunction with Eileen E. Birch, PhD and Jonathon Holmes, MD of the Retina Foundation of the Southwest *Contact Stereo Optical for current pricing.*

Functional Vision Analyzer™ Stereo Optical

The FVA offers a number of exams to evaluate functional vision and better understand the patient's quality of vision. Background illumination levels inside the unit are constantly monitored and controlled by eliminating envi-

ronmental variables. The Functional Vision Analyzer[™] complies with established research standards. This lightweight and portable unit is guaranteed for two years.

The Functional Vision Analyzer[™] also features the new upgraded EyeView®Functional Vision Analysis Software that utilizes a digital image processor to procedure a pictorial model of the patients' functional vision based on their F.A.C.T.® contrast sensitivity data. EyeView® can also display contrast sensitivity curves as well as the raw data. Data can also be exported to excel files for analysis.

The UltraVision is so versatile, it can ft in any size exam room, making it the ideal product for your practice.

Visual Field Tests

The Amsler Charts Manual makes it possible to detect, localize, and analyze the visual functional disturbances which accompany the beginning and evolution of maculopathies. Also used for retinopahty, maculopahty, and metamorphopsia. The Amsler grids are a valuable part of the neuro-ophthalmic examination, and their use should not be restricted to patients with macular degeneration. This version is coil bound which permits the examiner to flip over the pagges completely to show only the selected grid. This set now comes fully laminated for more durability. Charts include: 1. Standard Amsler Chart white lines on black background, 2. Amsler Chart with diagonals with white lines on black background - used in cases where the central point is not seen. 3. Standard Amsler Chart except with red lines on black background used in cases of color-scotoma, 4. Amsler Chart with subdivided squares in the center. Uses white lines on black background. This chart allows a more minute examination of the juxta-central area, where the rectangle with the subdivided squares indicates the limits of the fovea. This same chart renders great service in cases of high myopia, when held at the punctum remotum of the uncorrected eye. 2 lbs.

BI 900 Slit Lamp Haag-Streit USA

The BI 900 combines simplicity and reliability in a modern LED Illumination system and offers integrated imaging through its built-in video adapter. In addition to the widely-recog nized superiority of the LED illumination, the BI 900 offers 14mm aperture and is controlled through the new RM02 "release module," thus eliminating the need for a power supply. The BI 900 is equipped with a Kepler microscope providing the default magnifications 10_ and 16 . With a set of optional eyepieces it can be extended to 25 and 40 magnification. The maximized diameter size of the ocular view ensures fatigue-free examination even on long working days. Both the slit illumination and background illumination (imaging) are conve niently located adjacent to the single hand iovstick base. The RM02 also serves as a double function for imaging capture and expo sure control if the BI 900 is equipped with the optional Imaging Set.

Ultra G5 Zoom Slit Lamp

With the touch of a switch, the new Marco Ultra G5 Zoom Slit Lamp instantly delivers unprecedented high-resolution optics in a motorized zoom optical system. Utilizing a proven motorized zoom microscope focusing system that is used on Marco operating microscopes, the G5 Zoom combines the sophistication of a high-level focusing system with the overall modernization and optical efficiency of the new Ultra Slit Lamp design. All slit lamp controls are conveniently "concentrated" for easy one-handed operation, allowing the operator to maintain a constant, comfortable examination position. Other prominent features on the G5 Zoom include an illuminated magnification power display window, a "flip-up" magnification display min ror, and a built-in tonometer mount. Contact Marco for current pricing.

The Ultra series of slit lamps from Marco is the result of many years of extensive product research and delicate engineering. The Ultra series introduces a quantum leap in optical technology and manufacturing techniques resulting in better construction and better materials. Overall a more ergonomic and modern design, each slit lamp in the series is a complete composition of the latest in materials and lens coating technology, filtering light better and more efficiently with a measurable 20% increase in optical resolution and clarity. True Daylight Illuminator Richmond

Pseudoisochromatic color tests and Farnsworth Arrangement tests recommends daylight or equivalent for proper illumination This includes Farnsworth D15, 100 Hue, SPP, HRR and Ishihara, for example. The True Daylight Illuminator provides 6280 degrees K lighting which closely matches the standards set by the International Commission of Illumination. These True Daylight Illuminators have been the subject of numerous color vision testing studies. Further, this Illuminator replaces the MacBeth Lamp which is no longer available. Daylight illumination has been found to be very important for acquired color vision defects (such as Plaquenil screening) and critical occupational applications. Consistency of lighting from exam to exam is very important in detection of drug interactions. The True Daylight Illuminator with Easel provides the proper angle for Pseudoisochromatic tests. The easel is removable for installation of a Flat Tray in order to use the Illuminator with arrangement tests. A convenient handle for ease of transport, light switch and 4 ft, cord are included. 137R Daylight Illuminator with remo \$250.00

5142R Flat Tray for mounting in place of removable Flat Tray \$44.00

SL-102 Slit Lamp Microscope SNC

Features include a 10X evepiece with 1X and 1.6X objectives for total magnification of 10X to 16X and 25.6X, slit image rotation from 9o to 180o, with tilting illumination up to 20o in 5o steps with the slit illumination system. Slit diaphram disc has five apertures of 10mm, 6mm, 3mm, 1mm and 0.2mm, and a wedgeshaped diaphram for setting infinitely variable slit lengths. Pre-focused and pre-centered tungsten lamp, easy-to-read scale window

accessories include: chin rest papers, replacement mirror, extra lamps for illumination unit and 16X eyepiece. Accepts applanation tonometer. Honey Grey finish. . . \$2.995.00 SL-102

> SL-203 Slit Lamp Microscope SNC

This Galilean-type stereoscopic microscope features a sophisticated drum magnification changing system with 5 magnification changes, a WFH 15X eyepiece for total magnification of 6X, 10X, 16X, 25.6X and 40X, and tilting illumination up to 20°. Unit allows for 0° to 180° slit image rotation and incorporated a filter disc system for heat absorption, 50% neutral density, Cobalt Blue filter, and an open aperture setting. Features halogen illumination and is video or photo-capable. Photo attachment and assistant scope available. Accepts applanation tonometer.

The SL-D701 Slit Lamp features LED illumination that allows for observation under a brighter, more homogeneous illumination source while the short wavelength spectrum permits the observation of minute details in the anterior chamber and vitreous. An innovative illumination system using the optional BG-5 background illuminator allows for observation and documentation of meibomian glands in the patient's lids. With its optional DC-4 Digital Photo Attachment the SL-D701 can obtain clear and sharp still images of the eye as well as vivid color videos with remarkable resolution and detail. Basic EZ Capture software is provided with the DC-4 attachment. Contact Topcon for current pricing.

Reichert

PSL Portable Slit Lamp

The Reichert PSL Portable Slit Lamp utilizes high luminance, white LED (Light Emitting Diode) light source, coupled with a lightweight and compact design that gives you the freedom of using a slit lamp where ever your practice may take you. With its battery, the PSL Slit Lamp weighs only 1.5 lbs. (0.68 kg) and fits easily and comfortably in your hand. Its ergonomic, portable design and convenient case make it an ideal instrument for nonambulatory patients, nursing home visits and veterinary work. The PSL's high luminance light source provides about 10,000 lux of white light and has a lifespan of 50,000 hours or more. It also provides bright, consistent light, as well as the convenience of not having to replace bulbs. The PSL Slit Lamp comes with two long-lasting batteries and its own battery charger, allowing you to charge the batteries as necessary.

Axis Adjustable Trial Frames Richmond

These new trial frames are quite comfortable since they are sized to the patient's needs and adjustable for temple length. They are avail able in sets or individually. The set includes a PD rule to make accurate frame selection quick and easy. Each frame holds three trial lenses in front and a fourth lens in behind on each side. All have a knob to rotate the axis of the front lenses. The Pediatric set comes in blue and includes the smaller sizes 52.54.56.58 and 60 mm. The adult set comes in gray and includes 62,64,66,68, and 70 mm. Each set includes a storage box that holds 5 frames.

... \$100.00 52-70mm (Adult Frame Pictured) \$27.00

Bagolini Striated Glass Test

Finely striated, clear lenses used for evaluating retinal correspondence in patient's with eve deviations. Consists of 2 circular lenses indexed and mounted in a 38mm trial lens metal frame with tabs for use by the examiner. Used in the analysis of anomalous correspondence, suppression etc. In testing suppression, the lenses are placed in a trial frame with the striations at an angle of 135° and 45° for each eye respectively. With a spotlight stimulus, a patient with no suppression will see two diagonal lines crossing above, below or at the light source. This can be accomplished at near or far. If suppression is present, all or part of one line will not be seen. If the diagonal lines cross at the source when the cover test indicated an ocular deviation, the patient has harmonious, abnormal retinal correspondence. 34670X Case of 2 lenses \$99.00

Flipper Set of 12 Richmond

Flipper set with twelve(12) flippers, plus and minus each of 0.25, 0.50, 0.75, 1.00, 1.25, 1.50, 1.75, 2.00, 2.25, 2.50, 2.75, 3.00. Each marked with diopter power. Handles are colorcoded. These are setup with the plus lenses on the top and minus lenses on the bottom. Custom designed flippers and including prism flippers also available. The lenses are durable and will last for years. Includes acrylic holder. 5892R Set of 12 Flippers \$155.00

Flipper Sets Richmond

Flipper Set with Six (6) flippers, plus and minus each of 0.25, 0.50, 0.75, 1.00, 1.50, 2.00. Each marked with diopter power and handles are color-coded. Trial Lens Replacements

Richmond

Most offices have incomplete sets of trial lenses. Why is it that the one missing is always the one you need for the patient in front of you! We can help you fill in any miss-ing lenses in your set. We stock spheres and cylinders from 0.12 to 20.00, prisms from 0.50 to 8.00 plus accessory lenses such as occluders. pinholes. slits. frosted and Maddox.

Call or e-mail a list of the powers you need. Or you can visit our web site for a complete listing.

The lenses we have in stock are full aperture with chrome rims. If your set does not use chrome rims, tell us what type of mounting you need and we'll see if we can provide lenses in the rims to your specs. Discounts for 11+ lenses. Check www.RichmondProducts. com for more details. 4905 Replacement Trial Lenses, cv or sp .\$10.00 each

EDL-3M Diagnostic and Laser Lens U.S. Ophthalmic

The exceptional EDL-3M allows you to easily view the peripheral fundus and anterior chamber angle. Three retinal viewing mirrors are accurately angled to eliminate gaps. This lens eliminates the need to alter the vertical beam orientation, no matter what mirror is in use or where it is located. In addition, the central portion of the lens provides direct observation of the central portion of the posterior pole. With the EDL-3M, you get a better view of all quadrants of the chamber angle with much less rotation of the lens during examination. EDL-3M\$205

> Ezer EDL-20D U.S. Ophthalmic

Thanks to their tremendous versatility, the 20D lens is perhaps one of the most popular lenses used in ophthalmic today. These lenses allow practitioners to obtain a wide field of view in almost any situation. The EDL-20D by Ezer offers all of the benefits you look for in a 20D lens plus specialized, optical qualities only found in the most high-end diagnostic lenses. The lens is made of high-transmittance glass to achieve distortion-free, bright, clear images across the entire field. Whether at the slit lamp or with a headband BIO, users will benefit immensely from the computer optimized aspheric design of the EDL-20D. EDL-20D..... \$177.00

The EDL-78D by Ezer provides the perfect balance between magnification and field of view. This lens offers specialized, optical qualities only found in the most high-end diagnostic and laser lenses. Users will benefit immensely from the computer optimized aspheric design of the EDL-20D. The EDL-78D is de signed for use within the range of motion of all slit lamps and is made of high-transmittance glass to achieve distortion-free, bright, clear images across the entire field.

Custom Corrected Curve Trial Lens Set

Marco

Corrected curve meniscus convex and concave color-coded lenses. 18mm, 25mm dia. in standard 38mm anodized aluminum mounts. Large, high-impact plastic tray with detachable cylinder trays. Optional carrying case with cushioned cover. Complete or limited set of lens powers available. 7007 Custom deluxe (+, -) cyl. 7008 Tray w/+ cyl. only. 7009 Tray w/- cyl. only for custom. 7010 - cyl. only. 7011 + cyl only. 7012 Limited custom (+, -) cyl. 7013 + cyl. only for limited custom. 7014 - cyl. only for limited custom. 7015 Tray w/+ cyl. only. 7016 Tray w/- cyl. only. Accessories: 7017 Carrying case deluxe/ltd. 7018 Sphere tray only. 7019 Cylinder tray only. Replacement Parts: 7020 Sphere lenses. 7021 Cylinder lenses. 7022 Prism lenses. 7023 Accessory lenses.

Trial Lens Set Marco

The Marco full diameter trial lens set offers a more even distribution of bi-convex and biconcave lenses, from lower to higher power. The 35-6TW trial lenses incorporate metal rims which ensure strength and stability, satin-finish handles with the lens power engraved on both sides, and square and round handles to visually indicate plus or minus power; gold plated cylinder lenses also help distinguish the cylinder lenses from sphere lenses. The 35-6TW trial lens set comes standard with an attractive vinyl carrying case and a modern hard-composite lens tray that is much easier to clean and maintain. The Marco Perimeter trial lens set consists of a more modest selection of the same quality lenses that are found in the 35-6TW trial lens set. Contact Marco for current pricing.

TS 75 Trial Lens Set Reichert

The Reichert Lens Set contains 228 Full-view lenses with polished metal rims that come in an elegant carrying case. 70 Spherical Concave lenses: 0.12 to 20.0 Diopters (0.12/0.25D increments). 70 Spherical Convex lenses: 0.12 to 20.00 Diopters (0.12/0.25D increments). 34 Cylindrical Concave lenses: 0.12 to 6.00 diopters (0.12/0.25D increments). 12 Prismatical lenses: 0.5(2), 1(2), 2(2), 3, 4, 5,6, 7, 8. Eight accessory lenses: red, green, slit, Occluder, 1" hole(2), cross cylinder(2).

Please visit www.reichert.com to request a quote. 15015.

greater than 4.00 diopters. The Distometer (or Vertex Distance) gauge is designed to accurately measure the vertex distance between the apex of the cornea and real surface of the trial lens or the inside surface of the spectacle Rx lens. The Conversion Disc is then used to convert the vertex distance into an equivalent lens power for the estimated distance from the eye to the final Rx.

Patients have been demanding greater Rx accuracy due in part to the increasing popularity of custom progressive addition lenses, many of which require a vertex distance for accurate prescription calculation. This is especially true for the higher power lenses required by Low Vision patients. Further, the increasing use of prisms for Orthoptic exercises or Vision Therapy require accurate assessment of the vertex distance.

This Metal Distometer and conversion dial are well made for years of reliable use. 6755R Distometer Set, Metal with Dial and instructions \$150.00

Perimeter Trial Lens Set Richmond

Perimeter Trial Lens Set provides the key values of spheres and cylinders needed for use with your perimeter instruments. Each set contains 28 plus and 28 minus spheres from 0.25 to 16.00 and 12 plus (or choose plus cylinders) cylinders from 0.25 to 5.00.

Great for field refractions at nursing homes, hospitals, schools and satellite clinics. There is no need to have a complete set next to your analyzer, nor should you have to run back and forth to your exam room to use the trial lenses from your full set. Why risk having key lenses in your pocket when you leave the office? Values marked on each lens and in silver on black for easy identification in reduced light in the box.

The footprint of this convenient reduced lens set is only 9.5" (24 cm) square. Choice of a set with either minus or plus cylinders

6858xx Special Order 54 Prisms ONLY Set, in pairs, -0.12 to 10 Diopter with a case.....\$199 6859xx Trial Lens Set, 68 Perimetry (Plus Cylinder)... \$175

6860xx Trial Lens Set, 68 Perimetry (Minus Cylinder). . \$175

The Richmond trial lens set provides the full compliment of 140 lenses packaged in an attractive lockable briefcase. Space is provided for your choice of trial frame. See www. RichmondProducts.com for complete listing of lenses included. The set is also available with minus or plus cylinders only.

S & L Trial Set P91

New small trial set perfect for rounds, nursing homes, externships, visual field machines and screenings! 91 total lenses including 68 spheres starting with +/- .25 and goint to 10 diopters. 16 minus cylinders to 3.0 diopeters. One .50 cress (flip) cylinder. Lenses are etched on BOTH SIDES with the power and plus lenses have rounded handlges while the minus lenses have square handles making it impossible to mix them up! Removal tray, leather lockable case and large micorfiber cleaning cloth make this set simply the best small set on the market today. Trial frame available as an option.

Contact S & L Optics for current pricing. SL-03 Standard Trial Lens Set

287 lenses in this full diameter trial lens set! Spheres from +/- 0.12 to 20 diopters. Both plus and minus cylinders from .25 to 8 diopters! The set has +/-.37 spheres and an extra set of the .25 and .50 spheres since these are used the most. There are 14 prisms from 0.50 to 10 diopters. 16 accessory lenses including three hand-held cross (flip) cylinders and two Maddox rods (both red and white). This set is our standard luster set with the lens powers etched on both sides of the handles! The minus lenses also have a square handle and the plus lenses have a rounded handle so that you will never mix up any lenses again. The lockable leather case is hinged to keep it open and the insert tray is easily removed by two metal handles. We also have a beautiful color coded set in the same configuation. This new set is complete! You won't find a set with more lenses than this one or a nicer one at the most reasonable price. We don't sell skimmpy or cheap lens sets. Trial frames are available. Contact S & L Optics for current pricing.

Deluxe Trial Lens Set

Corrected curve set. Exact correction reads directly from the lenses in trial frame as each lens compensates for thickness, air spacing, and position. Sturdy, lightweight aluminum, color-coded rings. All lenses cemented and firmly clamped to ensure precise alignment. Available in minus cylinder only, plus cylinder only, or both plus and minus cylinders. Includes: 36 minus power spherical lenses (0.12D to 20.00D); 43 plus power spherical lenses in plus and minus powers (0.12D to 8.00D); 13 prismatic lenses; 8 accessory lenses

6803xx Full Trial Lens Set, R/B trial lens set. . \$380.00 Contact Topcon for current pricing.

Full Diameter Trial Lens Set

Topcon

The Topcon Full Diameter Trial Lens Set is a cost-effective combination of spheres, cylinders and accessory lenses. These economical bi-convex and bi-concave lenses are mounted in metal rims that have the lens power engraved in both sides of the handle. The full diameter lens provides a wide field of view during refraction. If desired, these lenses can be comfortably used with instruments that require a patient's correction such as in visual field testing. The Topcon Full Diameter Trial Lens Set is supplied with a handsome velvet lined vinyl carrying case. Includes: 35 pairs each plus & minus spheres, 17 pairs each plus & minus cylinders, 9 prisms & 6 miscellaneous accessory lenses. Contact Topcon for current pricing.

A Scan Units

Gilras GRU-5000A U.S. Ophthalmic

U.S. Ophthalmic

A-scan ultrasound is an essential part of ophthalmic practice and an indispensable tool, particularly in the preoperative evaluation of cataract surgery patients. The Gilras GRU-5000 A technique takes multiple, accurate readings and offers a wealth of features that will help you deliver better patient care and select an appropriate intraocular lens (IOL) power for cataract patients. With the GRU-5000 you will enjoy a full range of features in a portable, sleek design that offers an easy-touse color touch LCD screen.

20275 GRU-5000A \$3,360.00

Biometry

AL-100 Biometer

Our Biometer measures Axial Length & IOL power calculation with an easy-to-use touch screen, automatic tone-assisted measurement which is compact and lightweight. The biometer also has contact or immersion modes with a built-in printer.

Contact Tomey for current pricing at (888) 449-4045.

Multifunction

Gilras GRU-6000

This combination A-Scan/B-Scan unit features a 7" high-resolution display and foldable key pad. A-scan ultrasound is an essential part of ophthalmic practice and an indispensable tool, particularly in the reoperative evaluation of cataract surgery patients and in selecting an appropriate intraocular lens (IOL) power. Likewise, B-scan ultrasonography is an important adjuvant for the clinical assessment of various ocular and orbital diseases, producing essential two-dimensional, cross-sectional views of the eye and the orbit. The GRU-6000 will meet all of these clinical demands while providing several bonus features, such as fivepoint marking, B-Probe Protection, Image Output, and impressive oom. 20274

GRU-6000 \$9,131.00

Gilras GRU-7000 U.S. Ophthalmic

This combination A-Scan/B-Scan unit elimi nates signal loss, delivering sharp, focused images at 10 microns of resolution. A-scar ultrasound is an essential part of ophthalmic practice and an indispensable tool, particu larly in the preoperative evaluation of cataract surgery patients and in selecting an propriate ntraocular lens (IOL) power. Likewise, B-scar ultrasonography is an important adjuvant for the clinical assessment of various ocular and orbital diseases, producing essential two dimensional, cross-sectional views of the eye and the orbit. The GRU-7000 features complete measurement and calculation within seconds and can store up to five different user profiles. The unit's 15-inch high resolution color LCD also features ergonomic tilt that is fully adjustable. 20273

GRU-7000 \$10,205.00

GRU-5000 A/P Biometer+Pachymeter U.S. Ophthalmic

This Gilras unit allows for both A-Scan biometry as well as pachymetry. An essential part of ophthalmic practice, A-scan ultrasound is crucial in the preoperative evaluation of cataract surgery patients. The Gilras GRU-5000 A/P technique takes multiple, accurate readings and offers a wealth of features that will help you deliver better patient care and select an appropriate intraocular lens (IOL) power for cataract patients. Likewise, you can count on the precise corneal pachymetry readings you'll achieve with the GRU-5000 A/P. Whether you are comanaging LASIK, screening for keratoconus, preparing for LRI surgery, or going the extra mile with your glaucoma patients, this unit is programmed with all the features and data tools you will need. 20288

GRU-5000 A/P 5,240

GRU-5000 P Pachymeter U.S. Ophthalmic

The GRU-5000 P offers a wealth of features in an easy-to use, touch screen guided pachymetry unit. You can count on the precise corneal pachymetry readings you'll achieve with the GRU-5000 A/P. Whether you are comanaging LASIK, screening for keratoconus, preparing for LRI surgery, or going the extra mile with your glaucoma patients, this unit is programmed with all the features and data tools you will need. You'll get all this and more in a portable, sleek design when you choose the GRU-5000 P 20287

GRU-5000 P 3,140
